NIST has not submitted comments or rebuttals. The Editor's response is the only set of statements from NIST

| Comment Number | Comment | Editor's Response |
|---|---|---|
| 1 | The description of the use and possible content of this field is mysterious. It has been assigned a numeric field value of 9.901. (We) propose reserving a "block" of fields (say 900-901) for the ULW, and include it in Table 9. And, Universal Latent Workstation deserves to be defined, perhaps in Section 4. | Field 9.901 has been used to convey this information (as a user-defined field) for many years. This has been incorporated into ULW operations. This entry is designed to formally recognize that usage. Changing the number would potentially cause problems for police departments interfacing with the FBI. |
| 2 | Field 901 seems to be a very random number! | That is probably why it was chosed by users of the ULW several years ago. |
| 3 | This should go in the EFS block | Doing so would require changing the number from 901 which has been used unofficially for many years. |
