

CIB Presents:

An International
Workshop on

**Integrated
Design &
Delivery
Solutions
(IDDS)**

The IDDS Workshop Planning Committee:

Nicole Testa Boston (FIATECH)

Shyam Sunder (CIB and NIST)

Jack Davis (CIB and Virginia Tech)

Tom Regan (CIB and Texas A&M)

Robert Owen (The University of Salford,
UK), Coordinator of IDDS Priority Theme

Andrew P. McCoy (CIB IDDS and
Virginia Tech)

NIST
National Institute of
Standards and Technology
U.S. Department of Commerce

Future delivery of BIM-based & standard-based applications and services: an insight in French and European developments

A vision from CSTB

**CIB IDDS – FIATECH Workshop
Westin Arlington Gateway Hotel in Ballston, VA
18th April 2012**

***Carole LE GALL – CEO
CSTB - Centre Scientifique & Technique du Bâtiment***

CSTB
le futur en construction

- **CSTB: who we are – *in a nutshell***
- **CSTB: international partnerships & activities**
- **Integrated design, delivery & operation of Buildings**
 - The expected role of BIM
 - Configuration tools : make it flexible and accurate
 - Multidisciplinary evaluation : make it collaborative
 - 3D recognition : make it easy and affordable
 - SBA & BIM

- **Centre Scientifique et Technique du Bâtiment**
 - State-owned research and assessment institute in the construction sector
 - Active member of ENBRI
 - General Secretary of ECTP
 - General Secretary of E2BA
 - Mission:
 - Improvement of the quality of life in buildings and their environment
 - >900 employees, 50% engineers & researchers
 - Turnover: 92.4 M€ (2011)

Grenoble

le LE GALL

CSTB: international partnerships & activities

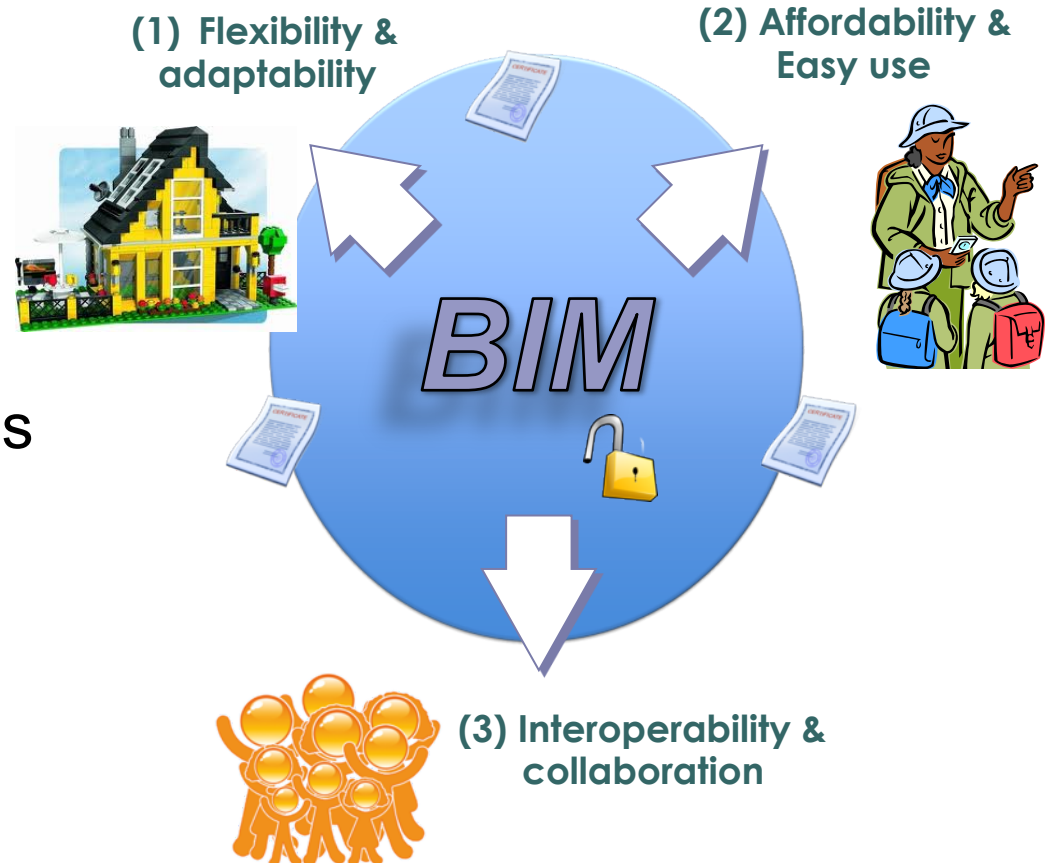

- **CIB Member**
 - Board member (C. Le Gall)
 - Active participation to various CIB WGs & TGs
 - Organisation of the Joint CIB W078-W102 conference (25-28 October 2011, Nice, France)
- **FIATECH**
 - Member of the European Advisory Board (A. Zarli)
- **BuildingSmart International**
 - Active member of the French Chapter (Mediaconstruct)
- **Sustainable Building Alliance (SBA)**
 - Co-chair of the association for the definition of science based shared indicators for evaluation of the environmental performance of buildings
- **Partnership with NIST**
 - Collaboration on fire security, energy efficiency, indoor air quality, material and systems lifecycle in buildings,...

- current advanced developments in France*
- latest research and innovative applications*
- a ground for identifying common CIB (IDDS) and FIATECH research challenges, trajectories and further synergies.*

Construction strong features

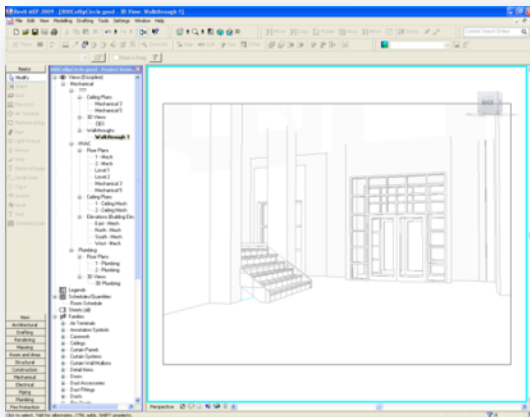

1. Each building is a prototype
2. Many companies are SMEs
3. Multi-disciplinarity is required

→ *Need for flexible, affordable, collaborative technology!*

Make it flexible and accurate!

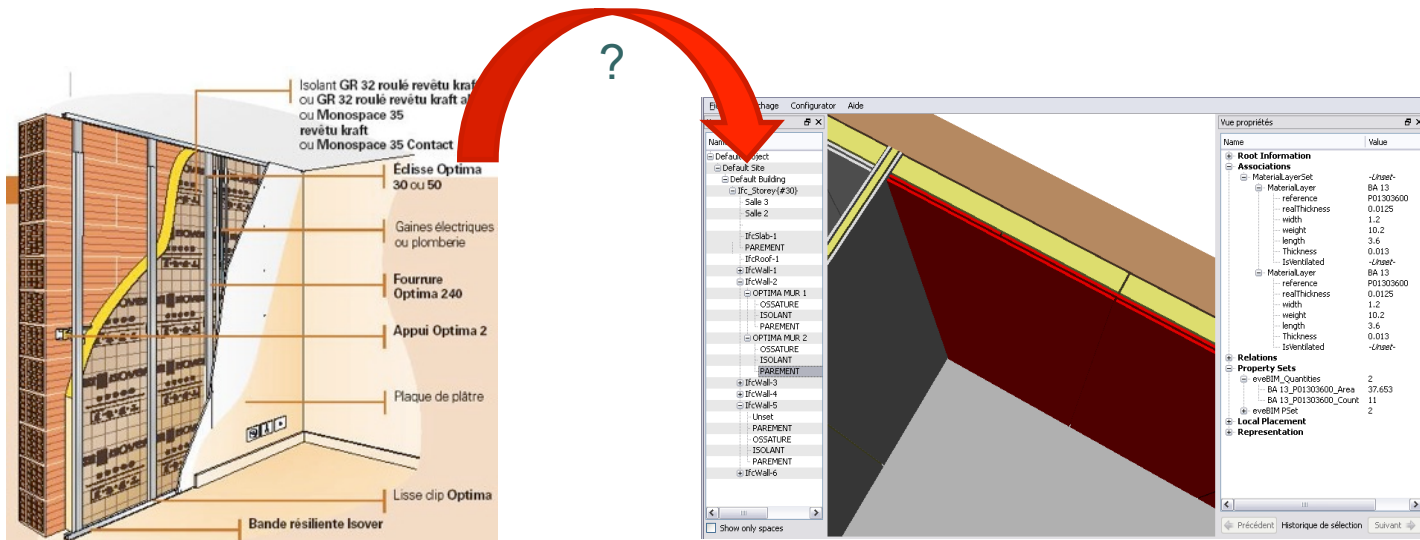

- In most cases, we use BIM models that are only made of generic information on materials, systems, and components
- They do not contain real and precise description of industrial products and systems used in the construction project
- This is a problem:
 - regarding the precision and completion of the model
 - regarding the accuracy of the simulations done using this model

#

- To make BIM a central element for the entire building lifecycle, it is of paramount importance to include detailed information about the industrial components and systems actually used => extended BIM
- Configuration tool allowing to ease the task of the designer by automatically generating execution details of the systems used in coherence with construction guidelines provided by the manufacturers

Costs and descriptions

Make it easy and affordable !

- Association of technologies for automatic creation of urban high-resolution 3D models based on photographs

- ACUTE3D : A spin-off created from the outcomes of a Research project joining CSTB, École Nationale des Ponts et Chaussées, & INRIA

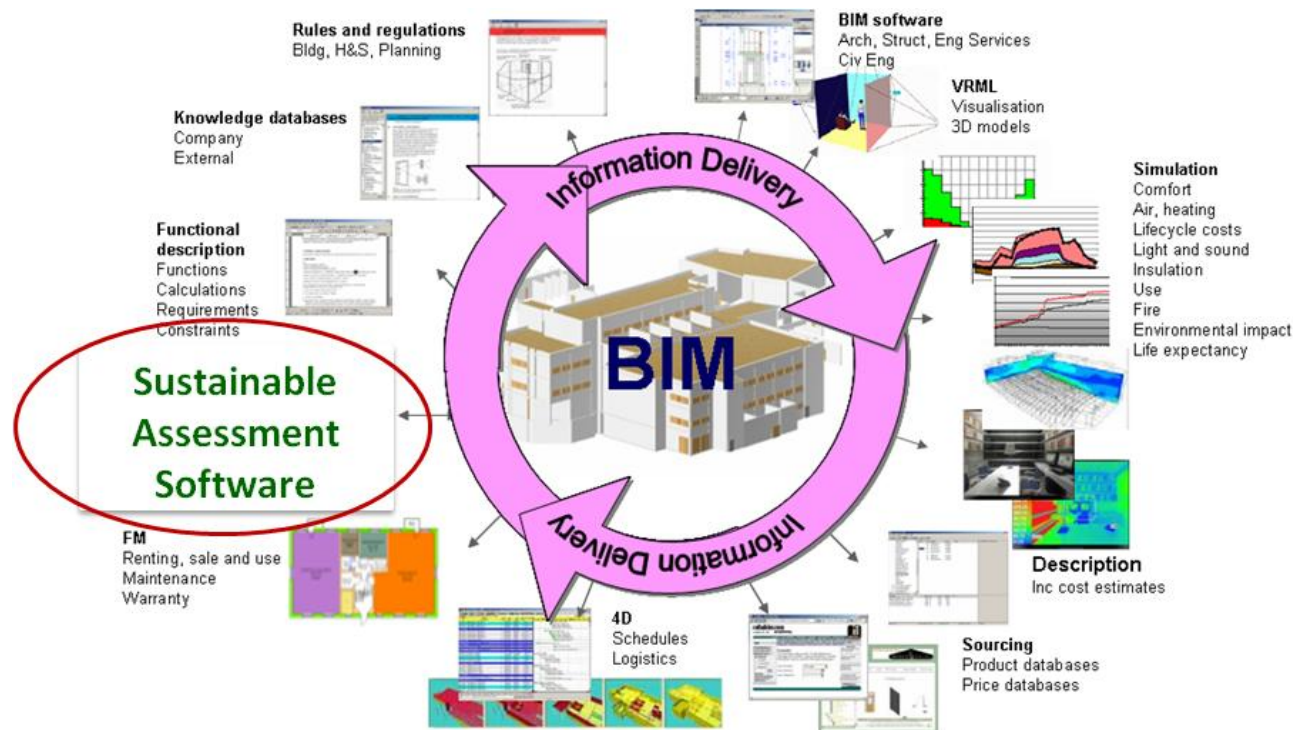

Toward international roadmaps : SBA & BIM (1/2)

- How **SBA Core metrics** can be implemented in BIM/ CAD tools ? (*how BIM/CAD tools can provide input data for LCA*)

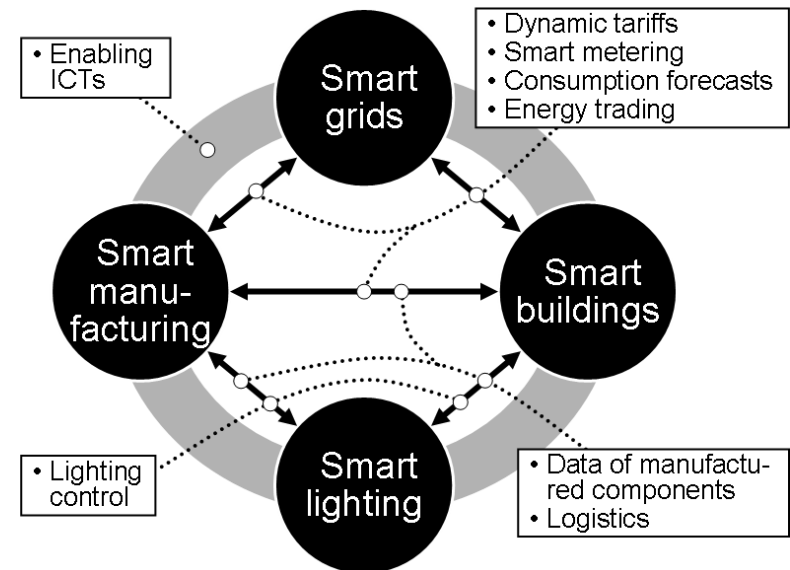

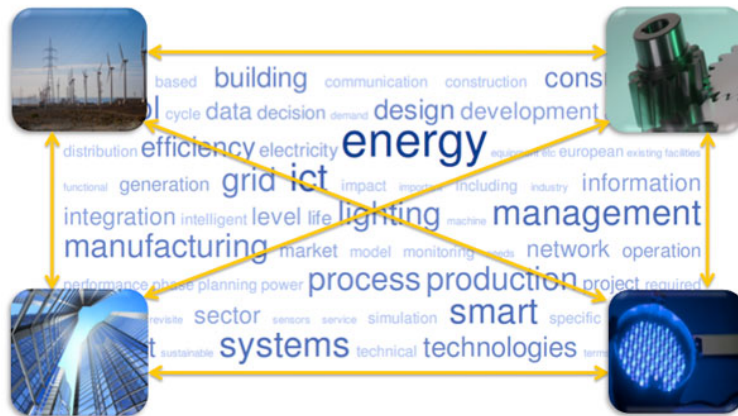

Before use stage			Use Stage			End of Life Stage						
Product Stage		Construction Stage				Disposal Stage						
Raw Material Process	Transport	Manufacturing	Transport	Construction Installation Process	Operation of building-incorporated services	Operation of non building-incorporated appliances	Maintenance, repair and refurbishment	Transport (of people)	Deconstruction	Transport	Recycling, reuse and energy recovery	Waste Disposal

- An analysis presenting LCA modules integrated with commercial product model based building design software
- Identification and analysis of what is expected to be delivered by the ongoing EC projects in this domain

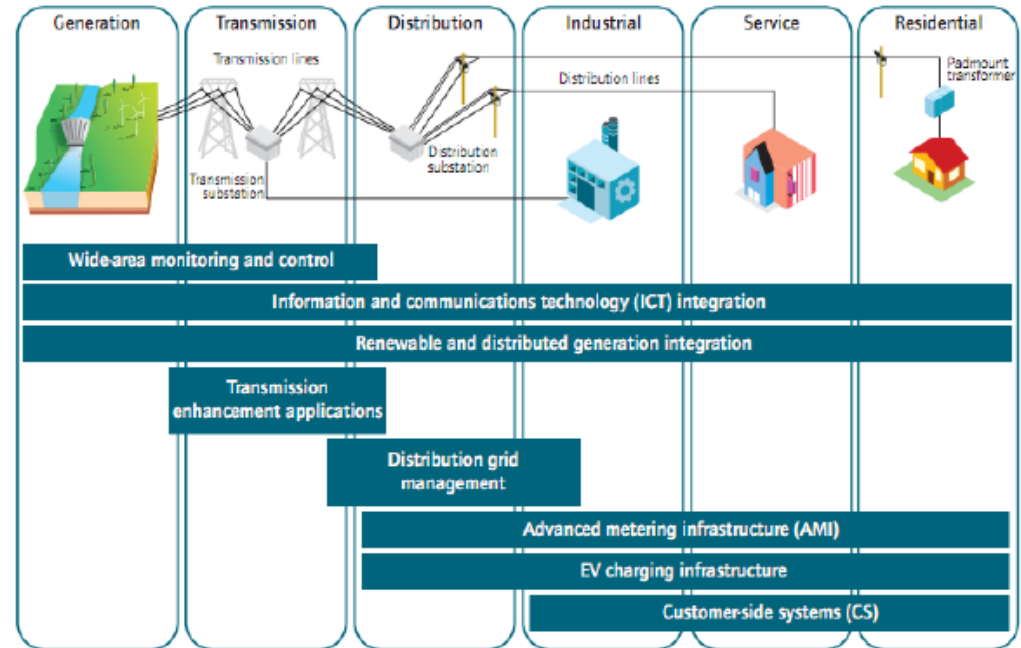

Toward international roadmaps : REViSITE (1/2)

- REViSITE is working for the European Commission to identify cross-sector research priorities covering the domains of **grids, manufacturing, buildings and lighting, for Europe in the area of ICT for Energy Efficiency (ICT4EE).**

○ Research areas of high priority:

- Technical interoperability and standardisation
- Design for energy-efficiency in all sectors
- Metrics and methods for quantitative assessment of ICT impacts
- The difficulty in substantiating the casual connection between research and technical development themes
- The importance of data visualisation and decision support particularly in the usage phase of each sector

ICT application domains in the smart grid
