Hello,
first of all : great job on the CSF 2.0 document. It is a very good version that extends the CSF to other sectors.

I would like to comment on ID.RA-02:
I feel that in ID.RA, there should be something stating to "Share information about threats and vulnerabilities with partners and suppliers". At the moment ID.RA-02 mentioned "receiving" information by participation. There is a value in informing the supply chain and/or partners in the industry of an observed threat. maybe it is implicit somewhere.

maybe something like
ID.RA-02 : Cyber threat intelligence is shared with internal and external stakeholders, via participation to information sharing forums, industry or government working groups.

Hope this helps.

Sincerely,
Jean-Noel Cazaudumec
