Hello NIST,

The draft is developing nicely.

My comment pertains to requests *3. Whether the AI RMF enables decisions about how an organization can increase understanding of, communication about and efforts to manage AI risks* and *7. What might be missing from the AI RMF*.

It would be useful to include two or three recent examples of bias in AI and its impacts in section *5.2.5 Managing Bias*. When I participate in industry discussions, there are many people who are surprised to learn about this issue, therefore the examples will improve the quality and impact of the document:

- Example 1: How Wrongful Arrests Based on AI Derailed 3 Men's Lives
- Example 2: AI is sending people to jail—and getting it wrong

*The comments/opinions shared in this message are mine alone and do not represent the opinions of any past or future employers.

Excellent work!
Julie C.
