Subject: CSF still out of touch with reality
To: "cyberframework@nist.gov" <cyberframework@nist.gov>

NIST

I love your hard work. I direct people to all your documents and have used them a 1000 times.

CSF grudgingly moving forward but it is extremely antiquated and far behind in the operational implementation and measurement of a CSF needed to fight the Russians.

I recently published the attached paper "Cyber Warfare Escalation to Nuclear Warfare Examination" which states the NIST CSF is like bringing a pocket knife to a gun fight.

CSF

1. Must have a an architecture baseline say measured against SABSA or TOGAF or NISTs own RMF
2. Reflect the meaning of implementation of deploying in operations
3. FAR TOO MANY WORDS which makes the document unusable and the words exude too much bureaucracy in it creation
4. Must have cyber warriors like me who have been in the trenches fighting the Cyber Security and Cyber Warfare battle
5. CSF MUST get past NIST "old think" into the Cyber Space Operational Continuum. NIST must understand the operational linkages for CSF in and out of CYBER SPACE. Like it or not, we all are in Cyber Space and Cyber Warfighting now.

I swear this is not about ego but if you hire me for a year, I can fix CSF and makeit an operational CYBER SPACE Warfighting document. See my Cyber SPace explanation at this link. [Redacted]
