Subject: Re: The use of Network

Perhaps using the word "Networks" the singular (Network) will give InfoSec managers the false impression they only need to secure their wire based network.

Subject: The use of Network

You use the word "Network" with no definition. Is it strictly Ethernet, Fiber, and wifi? Data can be exfiltrated via the whole radio spectrum. 802.11 is just one of over 99 different RF based protocols for delivering and receiving data.

Cheers,

Michael Young, CISSP CISM CISA
