

**Federal Building and Fire Safety Investigation
of the World Trade Center Disaster**

**Project #3: Analysis of Structural Steel
*Update***

Frank W. Gayle
Project Leader

December 2, 2003

**Materials Science and Engineering Laboratory
National Institute of Standards and Technology
U.S. Department of Commerce
frank.gayle@nist.gov**

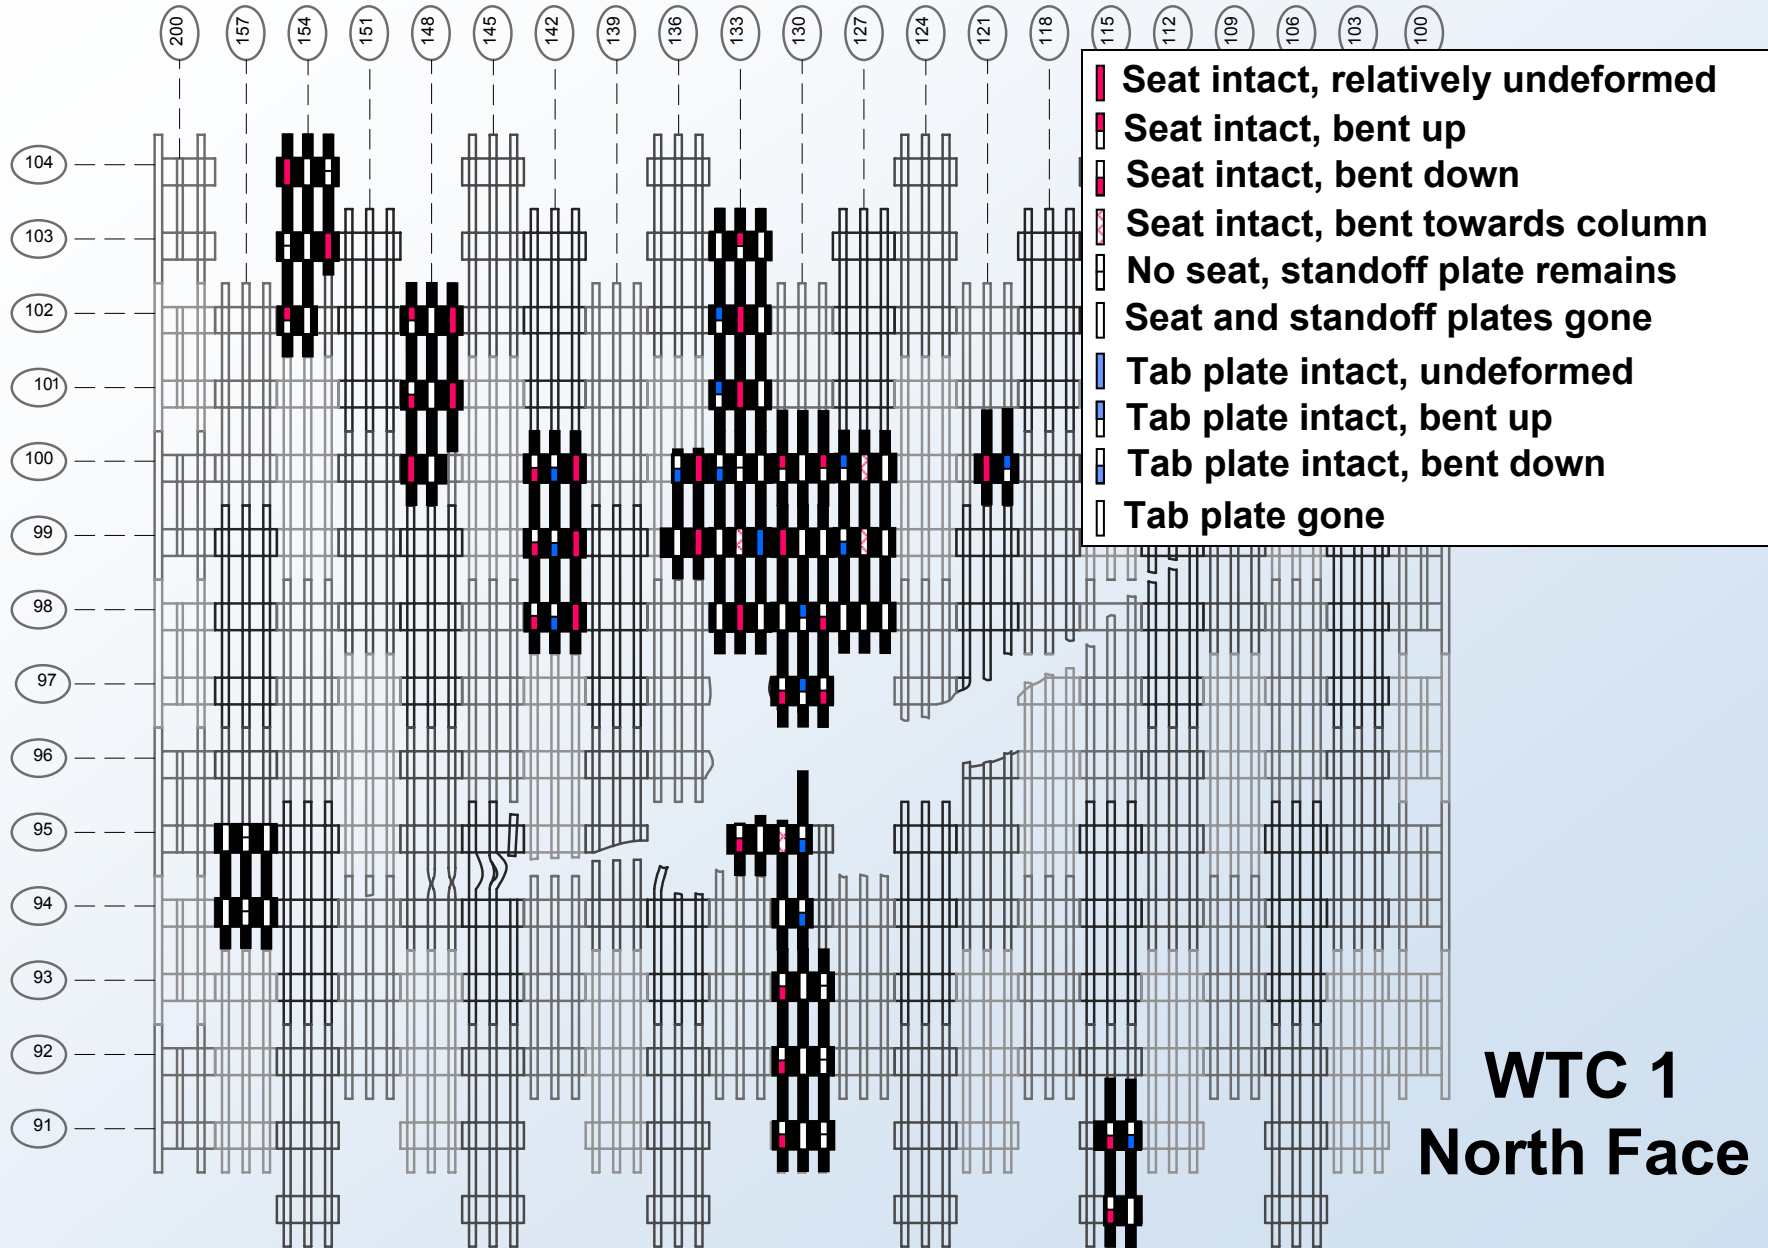

Project 3 Tasks

- Task 1 - Collect and catalog physical evidence
- Task 2 - Document failure mechanisms and damage
- Task 3 - Metallurgical and mechanical properties determination (room temperature, high temperature, high strain rate)
- Task 4 - Correlate specified properties with measured properties (*combined with Task 3*)
- Task 5 - Characterize thermal excursions of steel
- Task 6 - Final report

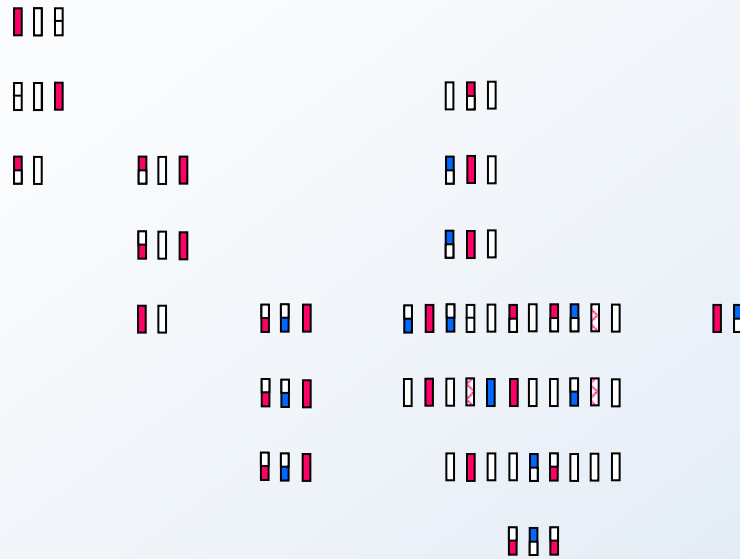

- Task 1 - Collect and catalog physical evidence (99% complete)
 - Structural steel
 - *236 items catalogued, report in final review*
 - Design specifications
 - *relevant structural documents reviewed, report in final review*
 - Material specifications (ASTM, etc)
 - Supplier production information
 - *ASTM, foreign specifications reviewed*
 - *Supplier documents, other 1960's era documents used to estimate properties*
 - *report in final review*

- Task 2 - Document failure mechanisms and damage (90% complete)
 - Contractor visual inspection of steel and analysis of failures completed; report drafted
 - Extensive analysis by NIST of steel
 - failure mechanisms analyzed and documented
 - repeated patterns of fracture/failure analyzed
 - failures mapped on structure
 - Photographic evidence enhanced and compared with recovered steel.
- January 15, 2004 anticipated completion

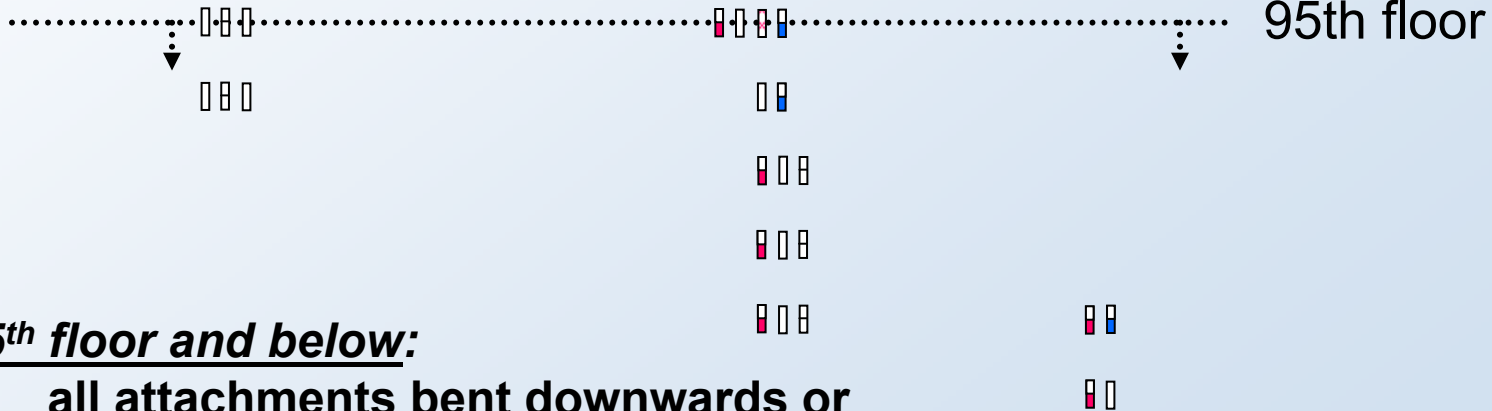

Floor Truss Support: Perimeter Seat Damage

Floor Truss Support: Perimeter Seat Damage

- Seat intact, relatively undeformed
- Seat intact, bent up
- Seat intact, bent down
- Seat intact, bent towards column
- No seat, standoff plate remains
- Seat and standoff plates gone
- Tab plate intact, undeformed
- Tab plate intact, bent up
- Tab plate intact, bent down
- Tab plate gone

95th floor and below:

all attachments bent downwards or missing (components ripped off at welds)

Broken Bolt Connection
Column or Spandrel Cut
Longitudinal Weld Failure
Unknown

Enhancements added by NIST.

© 2001. Roberto Rabanne/CORBIS

- Broken Bolt Connection
- Column or Spandrel Cut
- Longitudinal Weld Failure
- Unknown
- Panel Junction

Enhancements added by NIST.

Direct comparison with state of recovered steel

C40 hit by tip of tail?

Closer examination shows collision damage unlikely – damage occurred during fall

© 2001. Roberto Rabanne/CORBIS

Enhancements added by NIST.

Tasks

- Task 3 - Metallurgical and mechanical properties determination (room temperature, high temperature, high strain rate)
- Tensile properties determined for all perimeter columns
 - *test values compared with estimated properties (Task 1)*
 - *ideal stress strain curves developed*
 - *material parameters supplied for models*
- High Strain Rate properties determined for 6 relevant perimeter columns
- Truss rod and angles characterized
- Creep testing on hold:
 - Possibly not necessary for WTC 1 and 2
 - Review needs with contractor modeling fire response
 - *Allows earlier completion of high temp tensile properties*

Model Stress-Strain Curves

Perimeter column plates 1, 2, 4 – *Preliminary test data*

| Grade | Best estimate literature | NIST measured mean value | Steel source |
|-----------------------------|-----------------------------|-----------------------------|----------------------------------|
| <i>F_Y</i> ksi | <i>F_Y</i> ksi | <i>F_Y</i> ksi | |
| 36 | 40 | 39 | |
| 42 | 57 | 56 | Yawata "A 441 modified" |
| 45 | 57 | 56 | Yawata "A 441 modified" |
| 50 | 58 | 58 | Yawata "A 441 modified" |
| 55 | 62 | 64 | Yawata "A 441 modified" |
| 60 | 67 | 66 | Yawata "A 441 modified" |
| 65 | 73 | 73 | Yawata WEL-TEN 60R |
| 70 | 78 | 77 | Yawata WEL-TEN 62 |
| 75 | 84 | 83 | Yawata WEL-TEN 62 |
| 80 | 90 | 95 | Yawata WEL-TEN 70 |
| 85 | 105 | 108 | Yawata "A 514 mod" (WEL-TEN 80C) |
| 90 | 105 | 108 | Yawata "A 514 mod" (WEL-TEN 80C) |
| 100 | 105 | 108 | Yawata "A 514 mod" (WEL-TEN 80C) |

Mill reports used where available to estimate F_y , otherwise 1960s era literature studies on structural steel.

Model Stress-Strain Curves

Generation of model curves

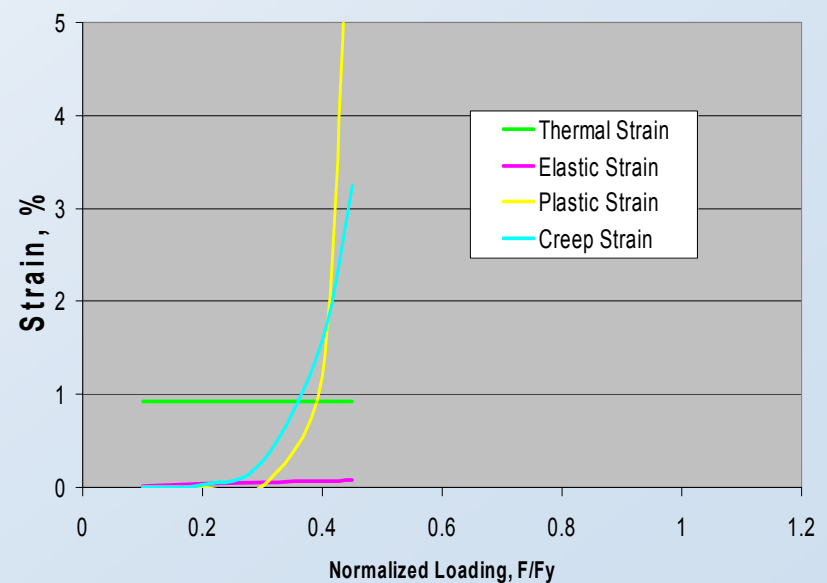

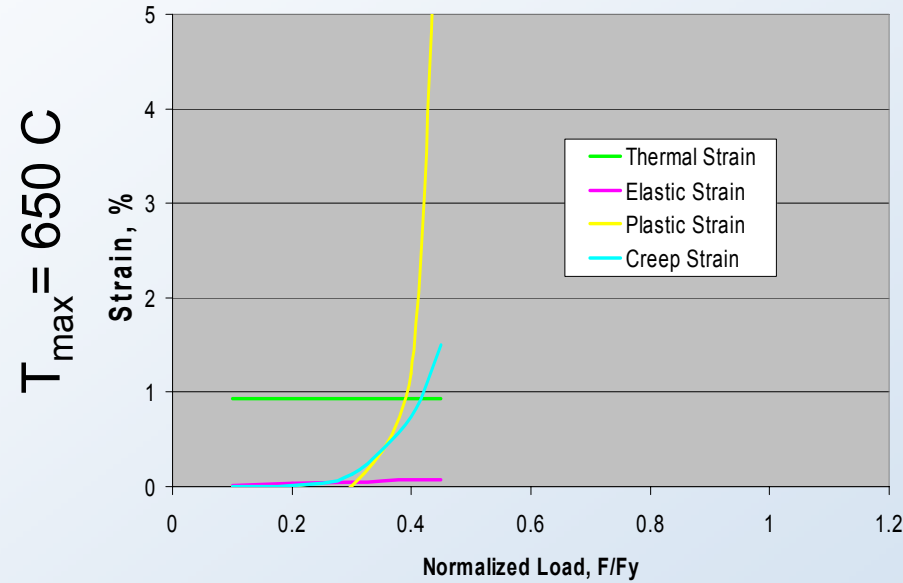

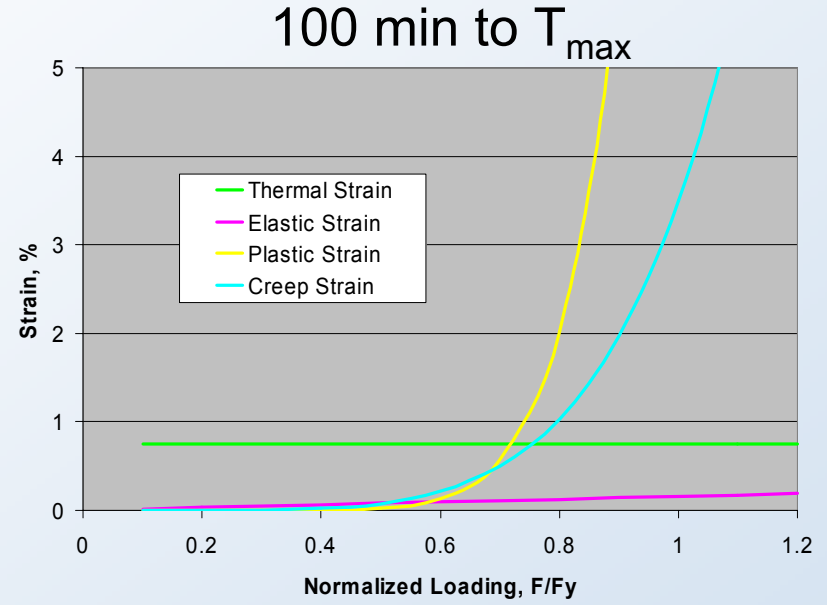

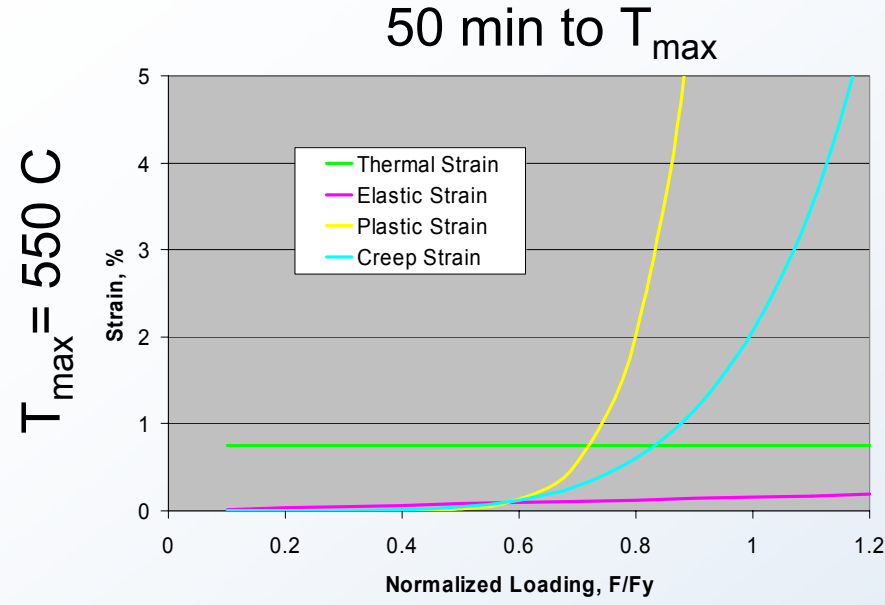

- Use standard E (stiffness) up to yield strength
- Compute work-hardening from average of NIST-measured curves
- Model plastic behavior with Voce's law
- Correct for dynamic effects

Voce's nonlinear isotropic hardening:

$$\sigma_p = R_0 \varepsilon + R_\infty (1 - \exp(-b\varepsilon))$$

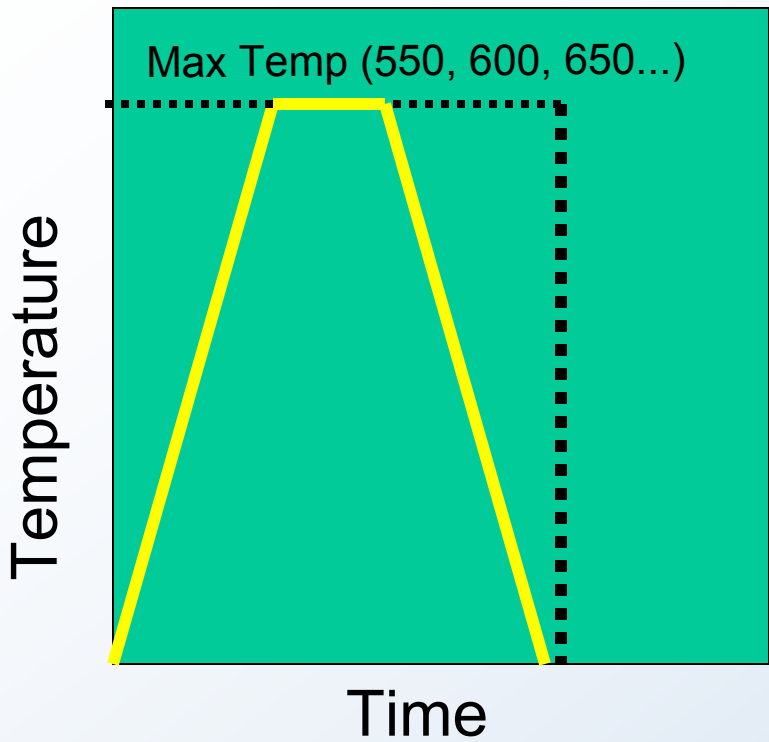

Creep, Plastic, and Thermal Strain – Relative Magnitude

$$\epsilon_{\text{TOTAL}} = \epsilon_{\text{thermal}} + \epsilon_{\text{elastic}} + \epsilon_{\text{plastic}} + \epsilon_{\text{creep}}$$

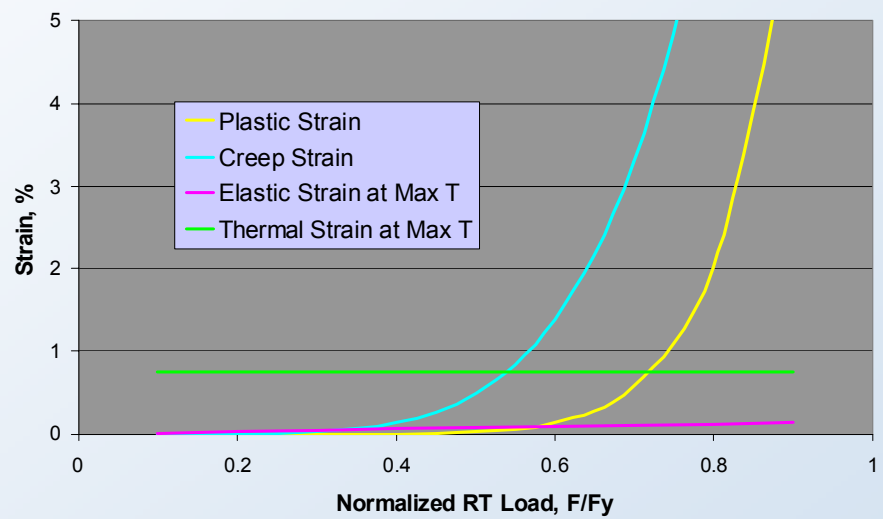

Creep, Plastic, and Thermal Strain – Relative Magnitude

$$\epsilon_{TOTAL} = \epsilon_{thermal} + \epsilon_{elastic} + \epsilon_{plastic} + \epsilon_{creep}$$

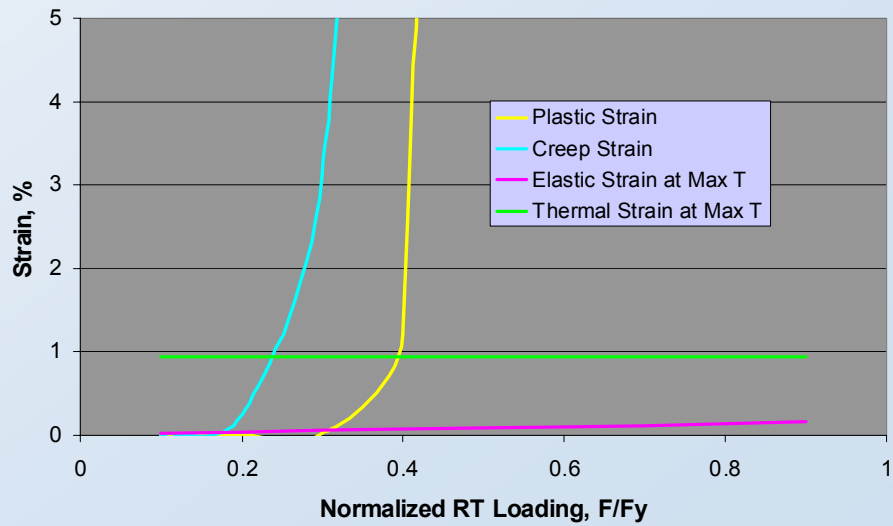

For even short hold times at high temperature, *creep strain may dominate total strain.*

30 min Ramp to 550, Hold 30 min, 30 min Ramp Down

30 min Ramp to 650C, Hold 30 min, 30 min Ramp Down

Current Status of Mechanical Test Program

| | % complete |
|------------------------------------|------------|
| RT tensile tests (quasistatic) | 95% |
| High temperature tensile tests | 40% |
| Creep (TBD) | -- |
| High Strain Rate (tensile) | 65% |
| High Strain Rate (compression) | 45% |
| Impact (Charpy) | 90% |
| Welds | 30% |
| Bolts (tensile & High Strain Rate) | 50% |

- Task 5 - Characterize thermal excursions of steel
 - Paint condition used to map upper limits to temperature exposure
 - *Analysis completion target date January 2004*
- Task 6 - Final report

Finally,

The Materials Science and Engineering Laboratory is proud to contribute its knowledge and expertise to the investigation.

Comments are welcome on:

- Goals and scope of test program
- Test methods
- Analysis of data
- Other areas of interest
