

In January 2023, the Postal Service's Corporate Information Security Office launched the Smart Cybersecurity Moment slides initiative. These mini presentations are designed to encourage communication about cybersecurity awareness best practices, trends, and policies impacting the Postal Service and its workforce. Anyone in the Postal Service can download these presentations and use them as openers or icebreakers for their meetings.

Smart Cybersecurity Moments deliver concise messaging that aims to increase cybersecurity awareness and improve security behaviors across the USPS enterprise.

Topics on these slides are focused on: cybersecurity policy, threat awareness, and risk reduction. Fraud prevention measures are also featured within the content. Critical topics addressed to date include:

- Phishing
- Internet of Things
- Social Engineering
- Ransomware
- Passphrases

The Smart Cybersecurity Moments initiative provides an efficient channel to reach more than 500,000 individuals comprising the Postal Service workforce.
