Subject: CSF 2.0
Date: Wednesday, April 26, 2023 1:04:38 AM

Dear Team.

Lines below my comments:

Table 1: Discussion Draft NIST Cybersecurity Framework 2.0 Core: Function and Category Names and Identifiers

[-] Govern (GV) -> align categories to COBIT 2019 Focus Area – Information Security
  - Add Category: People, Skills and Competences
  - Change category: Policies and Procedures -> Principles , Policies and Procedures

[-] Protect | Detect | Respond | Recover -> This functions must have capabilities of Lessons Learned. The principal reason is because have relations with a failure or lack of one or many controls.

[-] Protect : Add category about security development (APP Security). In this new category we would talk about devsecops, SAM , etc.

Thanks for this opportunity.

José Carlos
