

# AN EVALUATION OF PRESENTATION ATTACK DETECTION OF FINGERPRINT BIOMETRIC SYSTEMS APPLYING ISO/IEC 30107-3

Ines Goicoechea-Telleria, Belen Fernandez-Saavedra, Judith  
Liu-Jimenez, Raul Sanchez-Reillo

Carlos III University of Madrid, Spain

# Outline

- Why, how, what was done?
- Experiment
- Applying ISO/IEC JTC1 – 30107-3 to the experiment
- Results reporting
- Lessons learned

# Outline

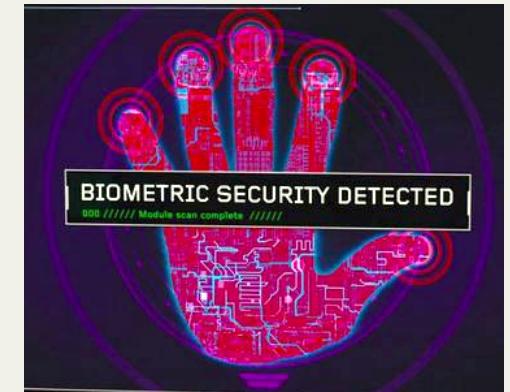

- Why, how, what was done?
- Experiment
- Applying ISO/IEC JTC1 – 30107-3 to the experiment
- Results reporting
- Lessons learned

# Why, how, what was done?

- WHY?

## iPhone 5S fingerprint sensor hacked by Germany's Chaos Computer Club

Biometrics are not safe, says famous hacker team who provide video showing how they could use a fake fingerprint to bypass phone's security lockscreen

- HOW?

Security evaluations (PAD)

ISO/IEC 30107-3 + Common Criteria

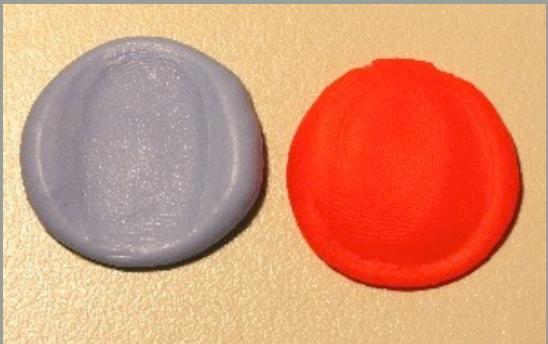

- WHAT?

Find vulnerabilities → experiment

Apply ISO/IEC 30107-3

# Outline

- Why, how, what was done?
- Experiment
- Applying ISO/IEC JTC1 – 30107-3 to the experiment
- Results reporting
- Lessons learned

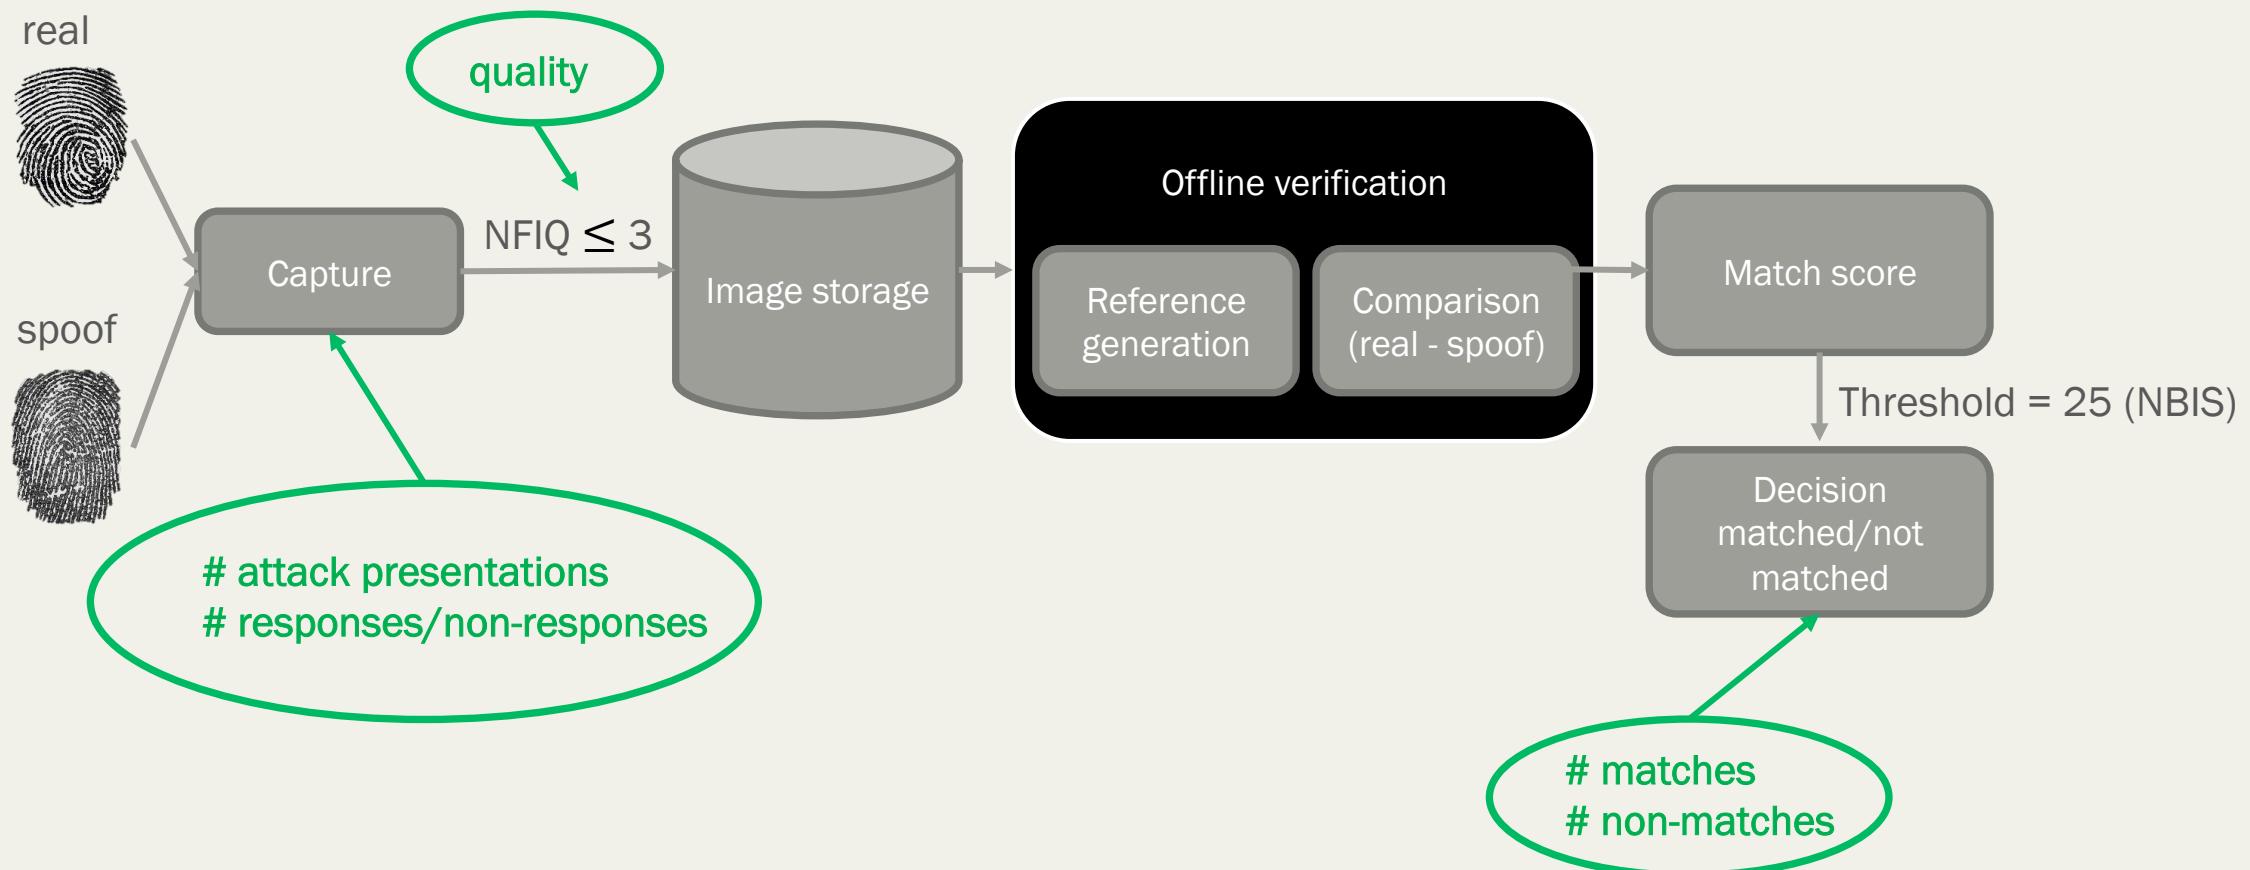

# Experiment

- 4 sensors: 1 thermal, 2 capacitive, 1 optical
- 330 + 126 artefacts
- 36 real fingers, 6 capture subjects
- 4672 images
- Cooperative and non-cooperative attacks
- 10 artefact species: Play-Doh (x2), gelatine, latex, silicone, white glue, latex with graphite (x2), silicone with graphite (x2)

# Experiment

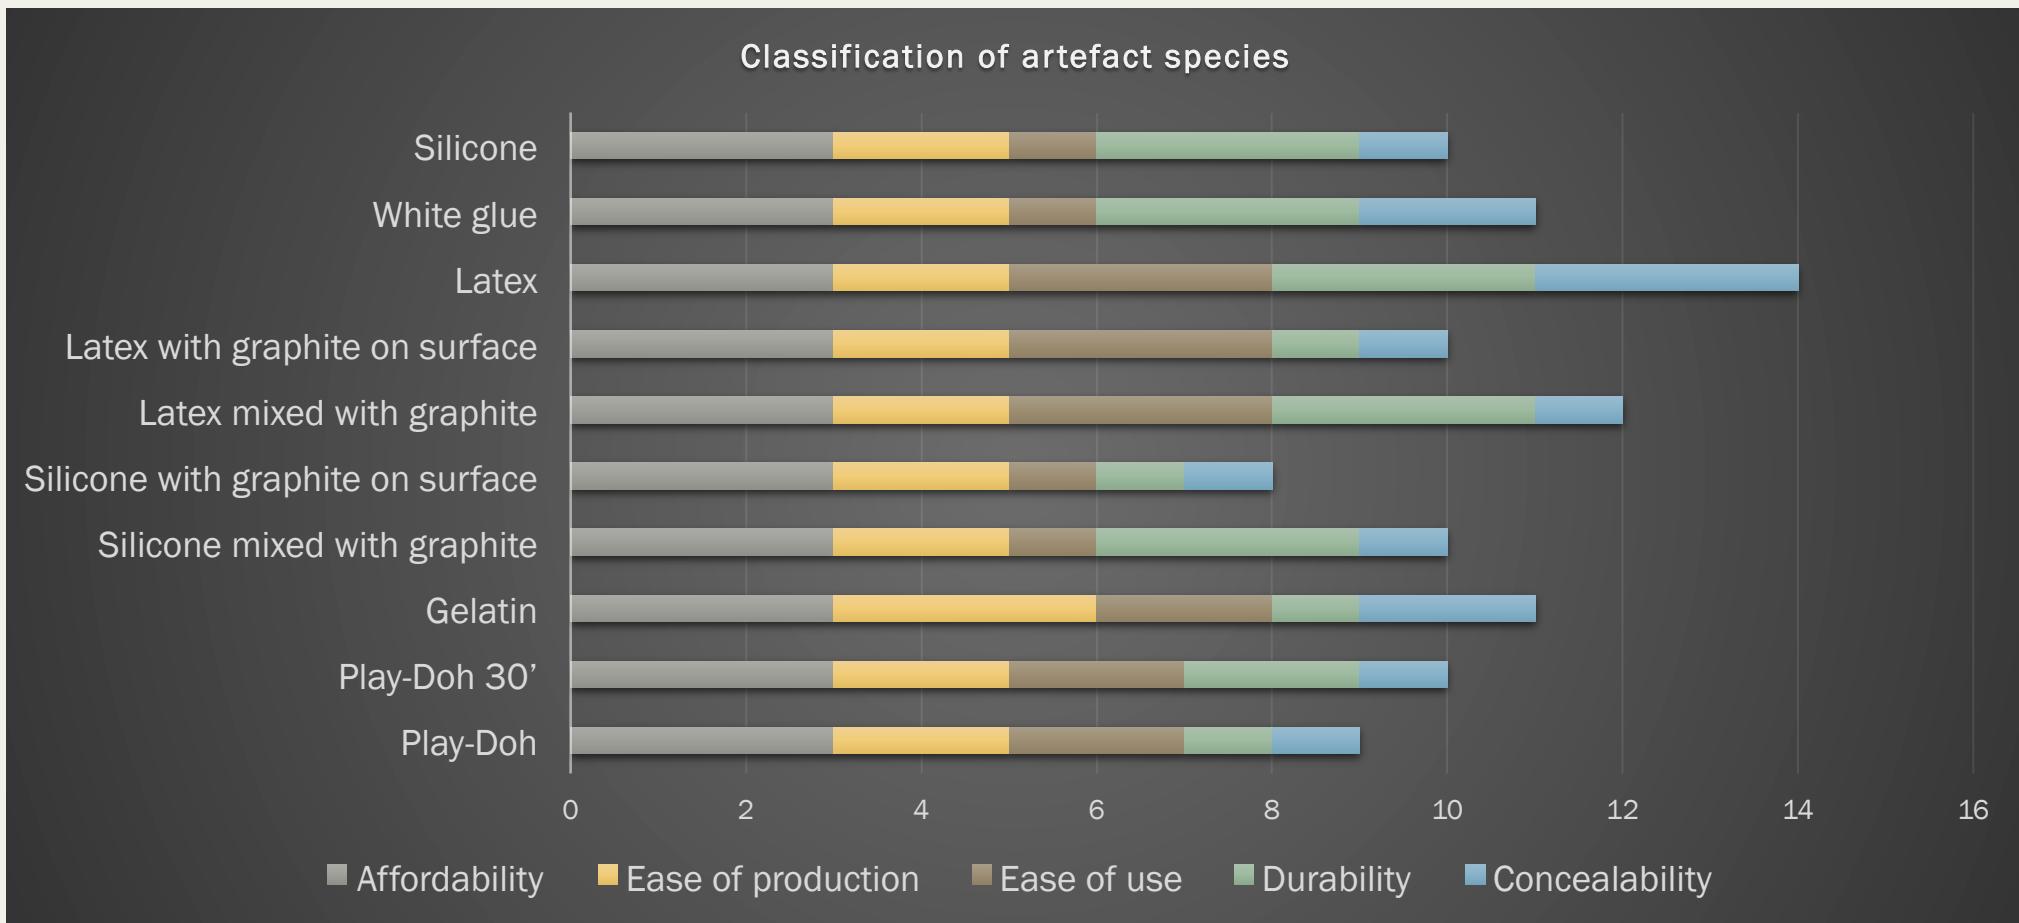

## Acquisition process

- If sensors respond → more artefacts

# Experiment

## Classification of artefact species

# Outline

- Why, how, what was done?
- Experiment
- Applying ISO/IEC JTC1 – 30107-3 to the experiment
- Results reporting
- Lessons learned

# Applying ISO/IEC JTC1 – 30107-3

## Artefacts

- Biometric impostor attacks
  - Artefacts appear natural
  - Extractable features

Select adequate materials for artefact species

- Separation cooperative/non-cooperative attacks
- Attacker's expertise

Cooperative

Non-cooperative

Before

After

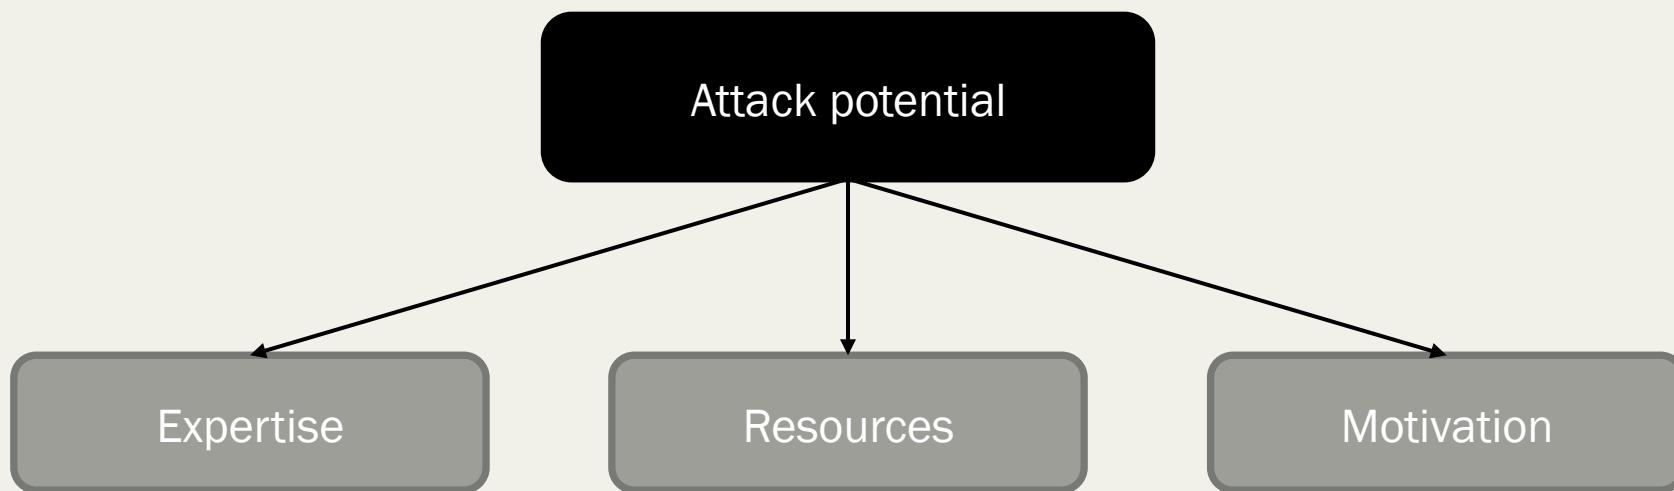

# Applying ISO/IEC JTC1 – 30107-3

## Process-dependent evaluation factors

- Enrolment
  - *Quality thresholds*
  - *Presentation policy (operator oversight)*
  
- Verification
  - *Usually no operator oversight*
  - *In this case -> no quality threshold*

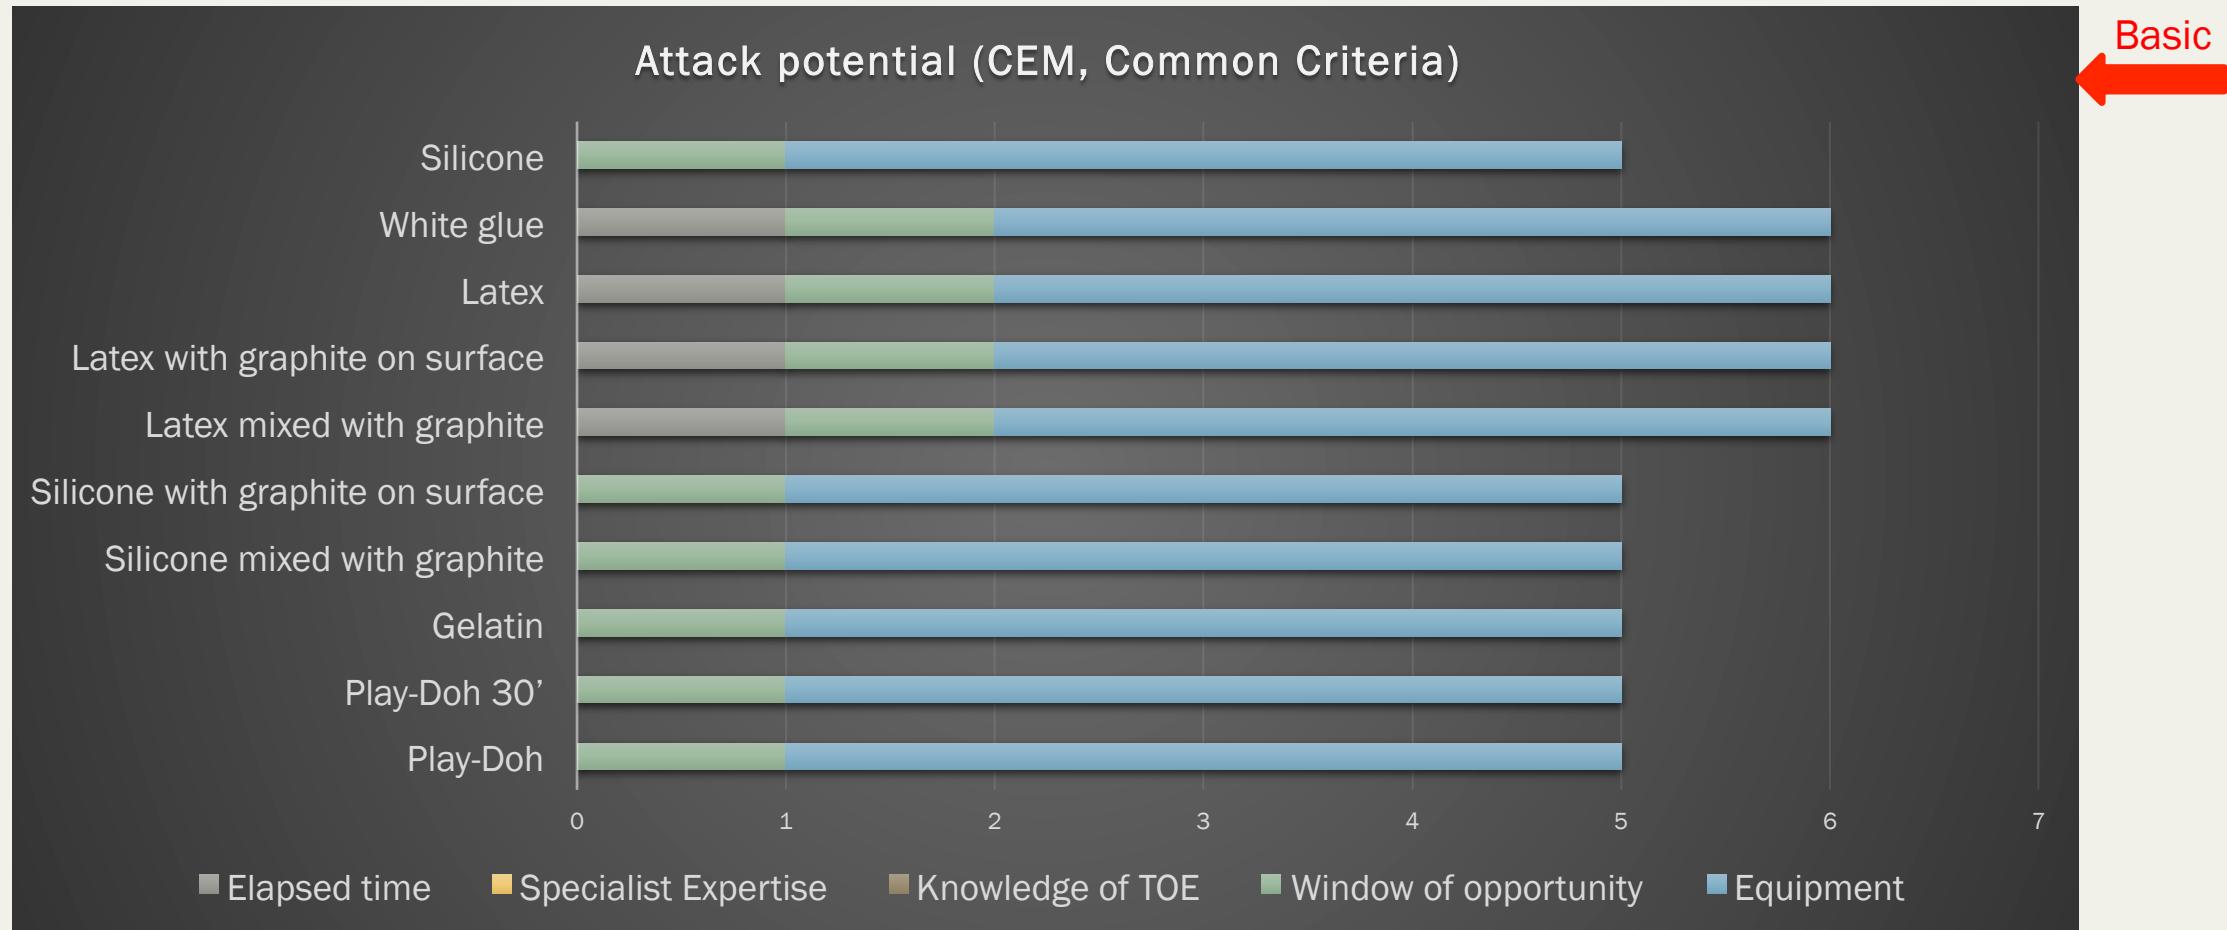

# Applying ISO/IEC JTC1 – 30107-3

## Attack Potential

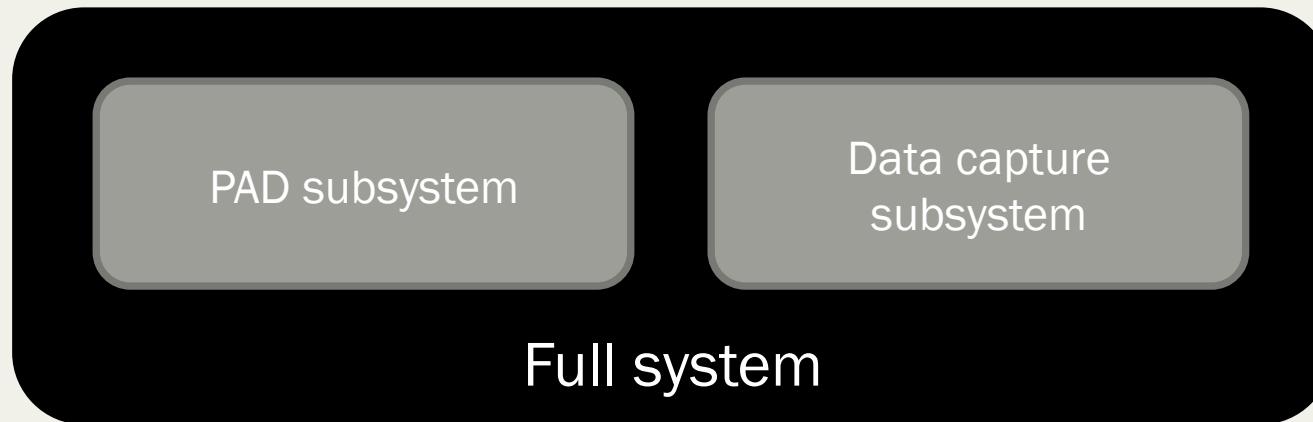

# Applying ISO/IEC JTC1 – 30107-3

## Attack Potential

# Applying ISO/IEC JTC1 – 30107-3

## Level of evaluator's access

This case: gray box  
(response/non response, quality, reference matching)

# Applying ISO/IEC JTC1 – 30107-3 Metrics

Attack Presentation Non-Response Rate

Data capture APNRR = *AP that cause no response/total AP*

Attack Presentation Non-Capture Rate

APNCR = *AP with low quality/total AP*

Attack Presentation Match Rate

APMR= *AP that match reference/total AP*

Attack Presentation Non-Match Rate

APNMR= *AP that do not match reference/total AP*

# Applying ISO/IEC JTC1 – 30107-3

## Required reporting metrics

System	Metric	Presentation type	Reported?
Data capture subsystem	APCER	Attack	✗ - no access to PAD subsystem
	BPCER	<i>Bona fide</i>	✗ - no access
	APNRR	Attack	✓
	BPNRR	<i>Bona fide</i>	✗ – no access
	APNCR	Attack	✓
Comparison subsystem (verification)	FNMR/FMR	<i>Bona fide</i>	✗ - no access
	APMR	Attack	✓
	Full system processing duration	Attack or <i>bona fide</i>	✗ – capture and verification done separately

# Applying ISO/IEC JTC1 – 30107-3

## Other reporting metrics

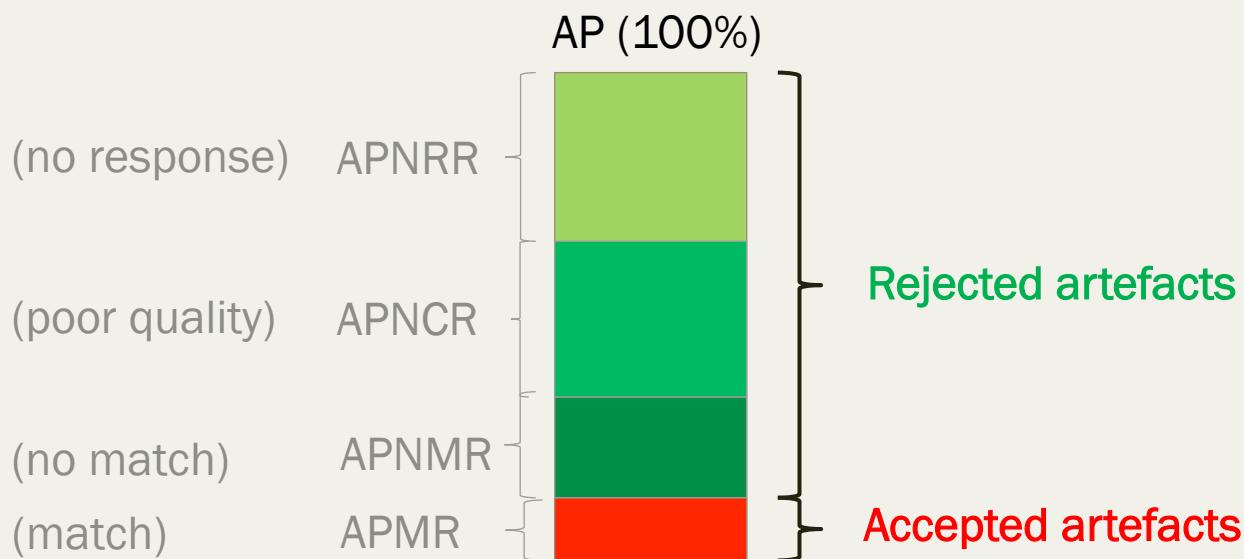

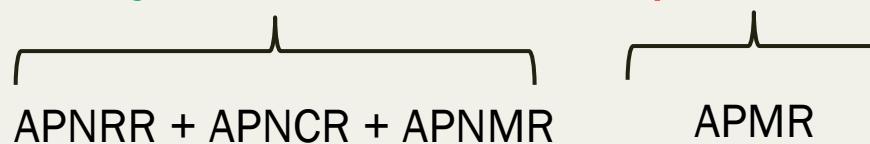

Item	Value				Comments
Capture subjects	6				4 male, 2 female
Sources for artefacts	36				Index, middle finger and thumb from both hands
Artefacts	330 + 126				Not included in 30107-3, addition by the evaluator. Thermal and capacitive + optical.
Artefact species	10				Silicone, silicone with graphite (mixed and on surface), latex, latex with graphite (mixed and on surface), Play-Doh (fresh and a bit dry), gelatine, latex and white glue
Artefact series	-				Out of each mold one artefact was made for each species
Detected AP (total, by capture subject, by artefact species, by artefact series)	*	-	*	-	* Reported later
Non-detected AP (total, by capture subject, by artefact species, by artefact series)	*	-	*	-	* Reported later
Detected normal presentations	-				Not reported – additional evaluation needed
Non-detected normal presentations	-				Not reported – additional evaluation needed
Alterations/modifications to artefact creation	-				There were no alterations to artefact creation. A different evaluation should be performed for this end.
Configuration of PAD systems under test	NBIS, threshold = 25				Set from previous performance evaluation, same sensors
Presentation attack resistance	Reported before				
Attack potential	Reported before				
Description of IUT (sensors)	1 therm., 2 cap., 1 opt.				Manufacturers and models are confidential

# Outline

- Why, how, what was done?
- Experiment
- Applying ISO/IEC JTC1 – 30107-3 to the experiment
- Results reporting
- Lessons learned

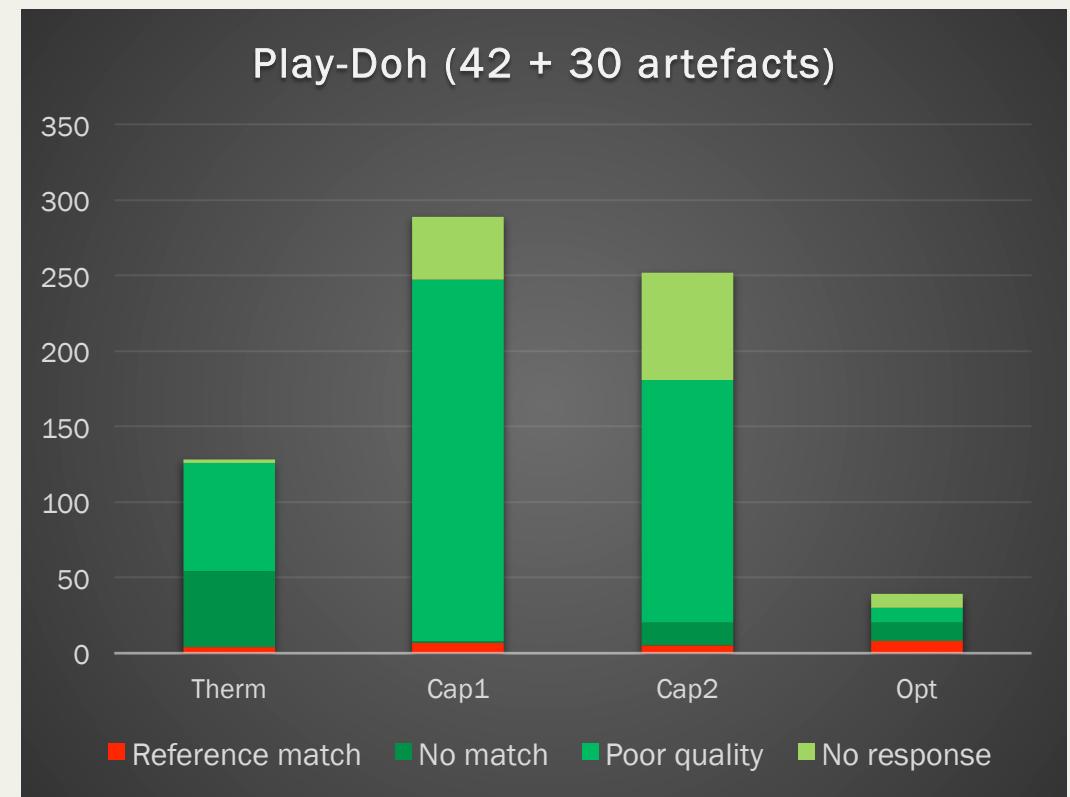

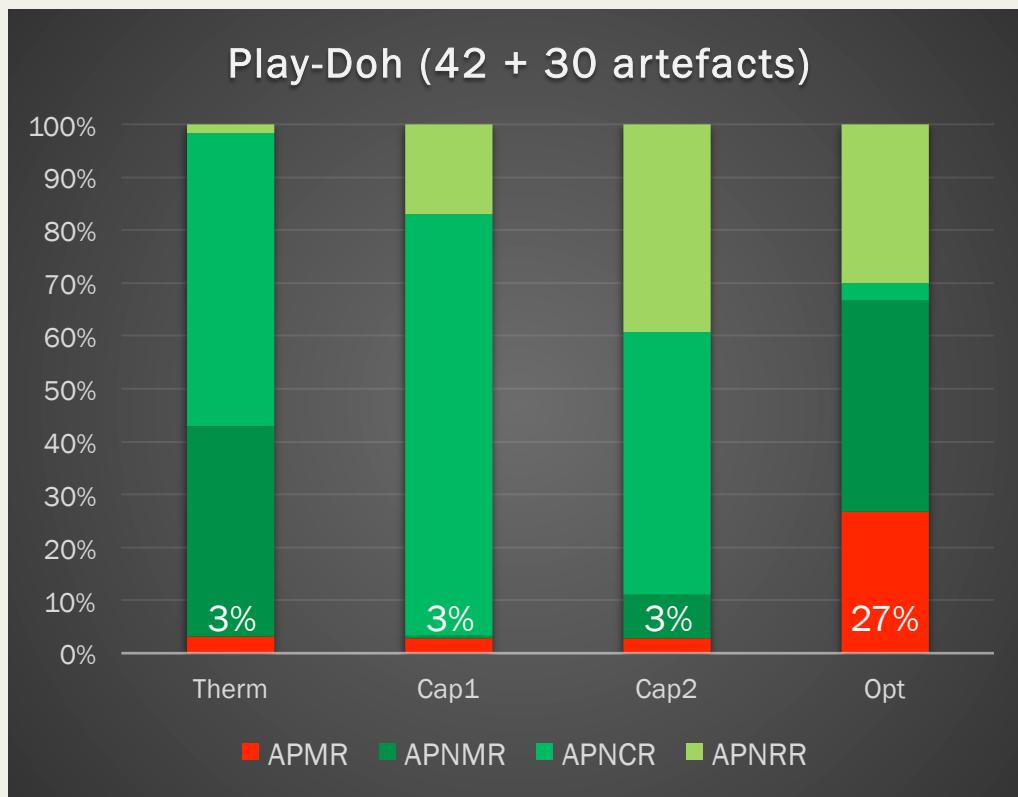

# Results reporting

- Attack Presentations = **rejected artefacts** + **accepted artefacts**

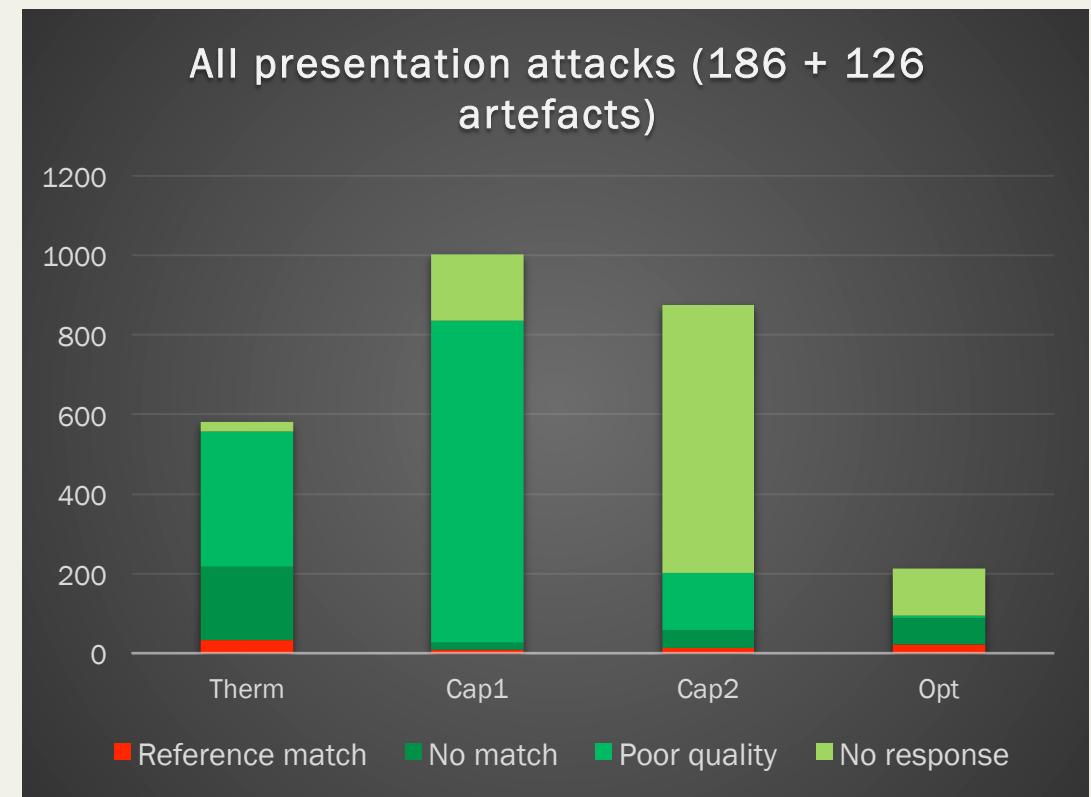

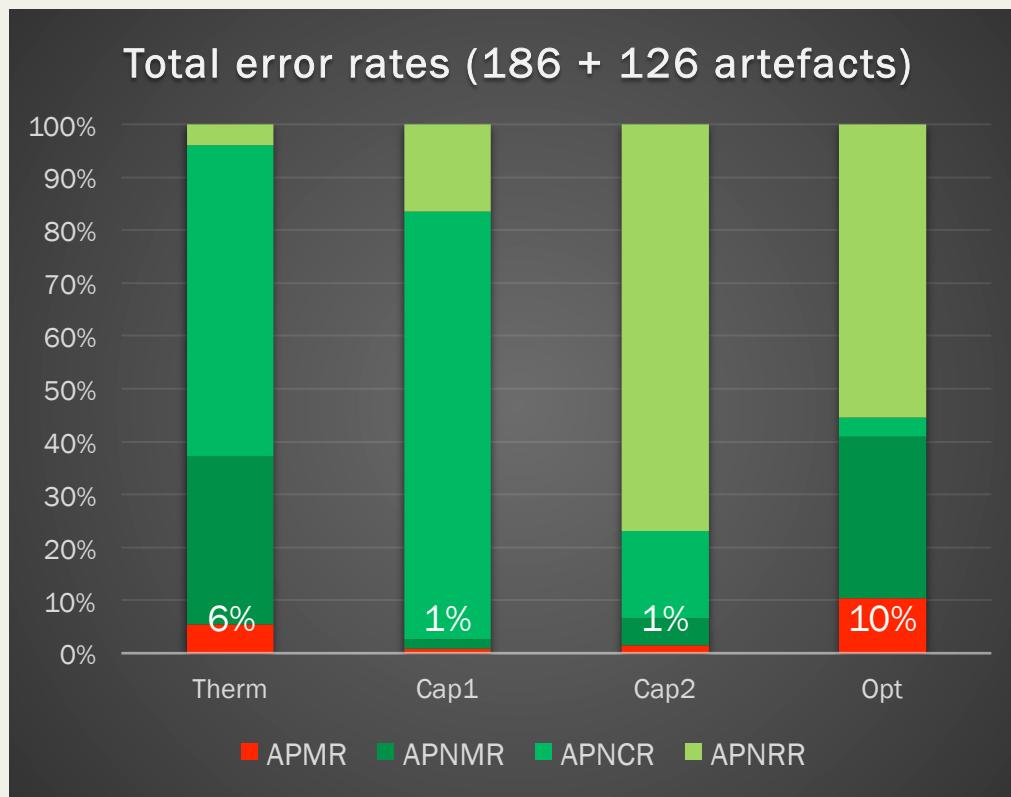

# Results reporting

## Cooperative attacks

# Results reporting

## (All) Cooperative attacks

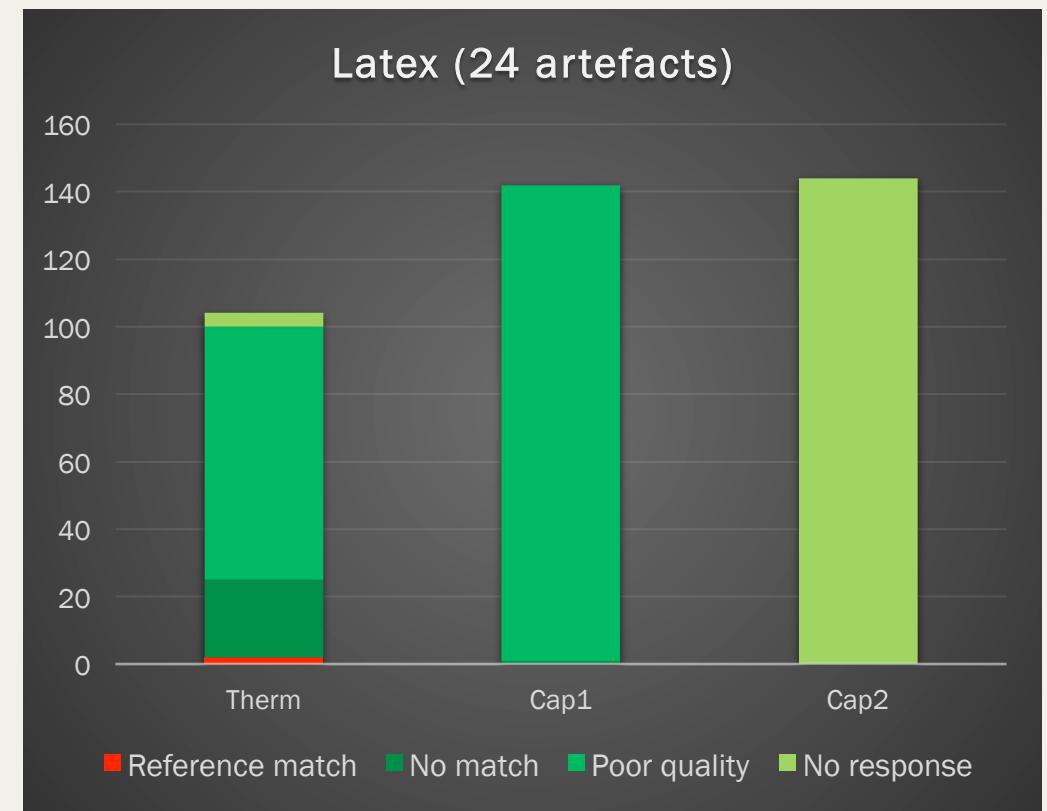

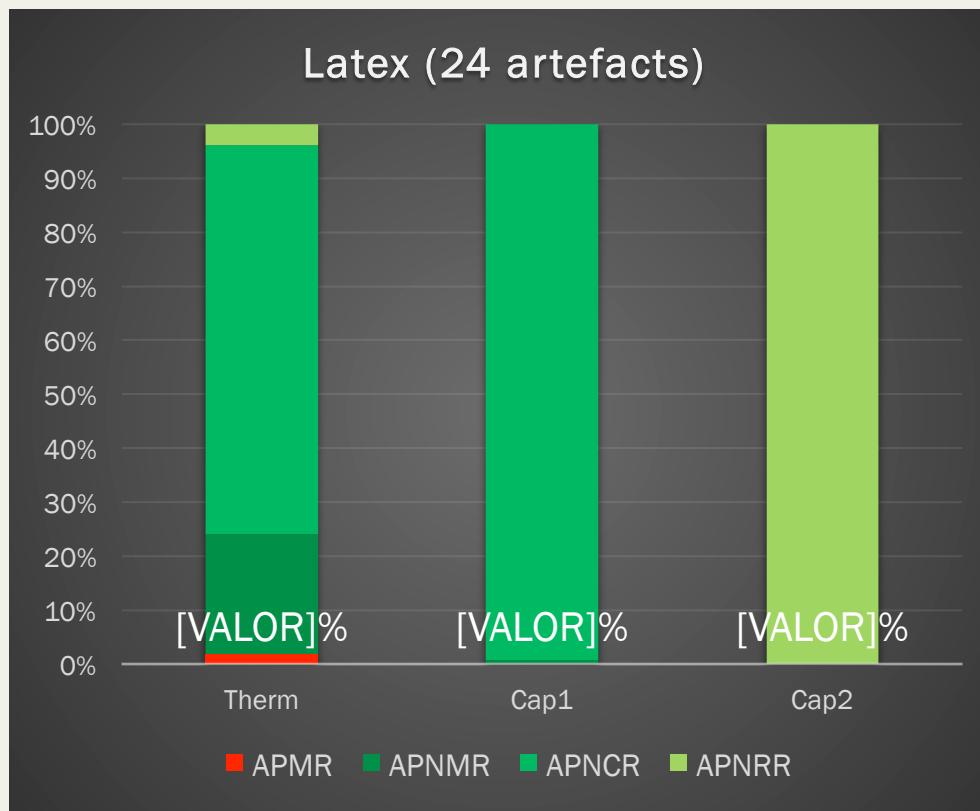

# Results reporting

# Outline

- Why, how, what was done?
- Experiment
- Applying ISO/IEC JTC1 – 30107-3 to the experiment
- Results reporting
- Lessons learned

# Lessons learned

- Compare security evaluations
- Attack Potential difficult to measure, should be more specific
- 2 side-by-side graphs (rates, quantities)
- Environmental conditions should be reported
- Give image examples of artefacts and captured samples
