# Disclaimer

- This talk mentions several software products.
- No mentions are or should be construed as endorsements of that software.
- In this research, they are test subjects.

- Installation *+ 10 – 10,000*
- Running *+ more*
- Uninstallation *+ less & more*
- Rebooting

**FORENSICS @ NIST** | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# We need to understand artifact origins.

- Files, Registry cells – mostly unknown origins.
  - Most created by software.
  - Some recognized from malware signatures.
  - Most just *in the way of finding relevant data*.

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# Diskprints help recognize *artifacts and behaviors.*

- Whole virtual machine states are available.
- We compute changes between states, making:
  - Catalogues of system behavior
  - Known-file lists
  - Software signatures

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# Diskprint data are being made from *forensic differencing.*

- New NSRL data sets based on diskprint sequences.
  - Using forensic differential analysis [Garfinkel *et al.*, DFRWS 2012]
  - Extension: *Forensic sequence analysis*

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# Outline: Data set production

- File system analysis language
- Diskprint lineage analysis workflow
- Results (with URL)
- Research on software signatures
- Conclusions

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

FORENSICS @ NIST

#NISTForensics

# File system analysis language

*Digital Forensics XML*

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# File system analysis with DFXML

- Digital Forensics XML describes storage system metadata.
  - Currently hosted by NIST.
    - Originally by Garfinkel [SADFE, 2009; DI, 2012].
  - Document language (with XML schema).
  - Python bindings available.
  - In use by forensic researchers, digital archivists.

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# DFXML describes storage, and changes.

- Simple annotations for files.
  - New, removed, modified.
- New analytics on *reduced data*.
  - *E.g.* timeline of changes, instead of whole system.

## The structure of diskprint data

*Lineage graph*

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# The diskprint lineage graph

A machine's state is related to its ancestors.

**FORENSICS @ NIST** | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# The diskprint lineage graph

A machine's state is related to its ancestors.

The history can fork.

The tree is rooted at the baseline OS.

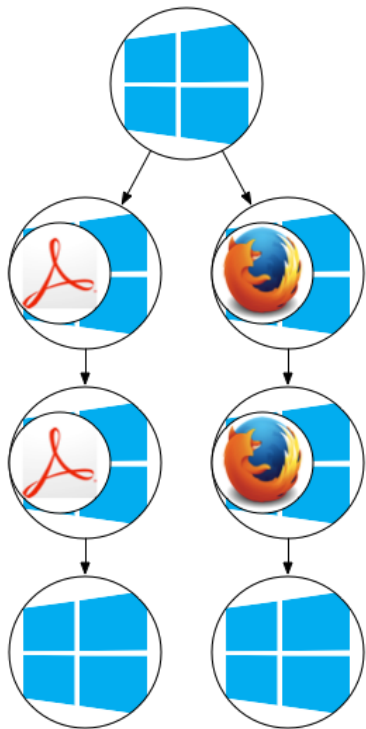

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# The diskprint lineage graph

A machine's state is related to its ancestors.

The history can fork.

The tree is rooted at the baseline OS.

# The diskprint lineage graph

A machine's state is related to its ancestors.

The history can fork.

The tree is rooted at the baseline OS.

The *lineage graph* is all of the trees.

## Results

*New-content data sets*

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# Now available: File system difference data

- File system changes available in:
  - Differential DFXML
  - NSRL RDS format (CSV)
  - CybOX
- Sector hashes of new and modified files
- <http://www.nsrl.nist.gov/dskprt/sequence.html>

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

# FORENSICS @ NIST

#NISTForensics

## Research

*Registry-based software signatures*

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# Developing software signatures

- What artifacts are distinct to an application?
  - Or, have sufficient affinity?
- Can the Windows Registry show the software history of a computer?
  - A boon to triage.

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# Methodology: “Document” search

1. Observe the sets of Registry artifacts created by a snapshot.
2. Assemble those sets into “Fingerprint documents”
3. Query with a Registry.

FORENSICS@NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# Signature challenges

- Some indistinct artifacts confuse signatures.
  - Need “Background noise” identification.
- (See me at poster session for more.)

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# FORENSICS @ NIST

#NISTForensics

## Summary

*Data in use,  
research on horizon.*

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# Community

- Forensic standards
  - MITRE
- Archival applications of Digital Forensics
  - BitCurator
- Academia
  - George Mason University
  - San Jose State University
  - University of California, Santa Cruz

**FORENSICS @ NIST** | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology  
U.S. Department of Commerce

# Conclusion

- Diskprints are a record of system states.
- The workflow extracts artifacts and behaviors.
- Artifact attribution tells a computer's software story.

FORENSICS @ NIST | December 3-4, 2014 • #NISTForensics

**NIST**  
National Institute of  
Standards and Technology
