

# **OSAC 2023-N-0001 Standard Practice for Training in the Areas of Video Analysis, Image Analysis, and Photography**

*Video/Imaging Technology and Analysis Subcommittee  
Digital/Multimedia Scientific Area Committee (SAC)  
Organization of Scientific Area Committees (OSAC) for Forensic Science*

## **Draft OSAC Proposed Standard**

# **OSAC 2023-N-0001 Standard Practice for Training in the Areas of Video Analysis, Image Analysis, and Photography**

Prepared by  
Video/Imaging Technology and Analysis  
Version: 1.0  
October 2022

---

### **Disclaimer:**

This OSAC Proposed Standard was written by the Organization of Scientific Area Committees (OSAC) for Forensic Science following a process that includes an [open comment period](#). This Proposed Standard will be submitted to a standards developing organization and is subject to change.

There may be references in an OSAC Proposed Standard to other publications under development by OSAC. The information in the Proposed Standard, and underlying concepts and methodologies, may be used by the forensic-science community before the completion of such companion publications.

Any identification of commercial equipment, instruments, or materials in the Proposed Standard is not a recommendation or endorsement by the U.S. Government and does not imply that the equipment, instruments, or materials are necessarily the best available for the purpose.

1  
2 **Standard Practice for Training in the Areas of Video Analysis,**  
3 **Image Analysis, and Photography**

4 This standard is issued under the fixed designation X XXXX; the number immediately following the designation indicates  
5 the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the  
6 year of last reapproval. A superscript epsilon ( $\Sigma$ ) indicates an editorial change since the last revision or reapproval.

7  
8 **1. Scope**

9 1.1 This practice describes the minimum criteria for training-to-competency programs  
10 in technical topics related to the disciplines of forensic video analysis, image analysis, and  
11 photography to satisfy Section 5.2 of Practice E2917. These requirements apply to forensic  
12 photographers and to forensic image and video practitioners.

13 1.2 *This standard does not purport to address all of the safety concerns, if any, associated*  
14 *with its use. It is the responsibility of the user of this standard to establish appropriate safety and*  
15 *health practices and determine the applicability of regulatory limitations prior to use.*

16  
17 **2. Referenced Documents**

18 2.1 *ASTM Standards:*

19 E2916 Terminology for Digital and Multimedia Evidence Examination

20 E2917 Practice for Forensic Scientist Practitioner Training, Continuing Education, and  
21 Professional Development Programs

22 2.2 *SWGDE Guidelines:*

23 SWGDE Training Guidelines for Video Analysis, Image Analysis and Photography  
24 Version: 1.1(February 8, 2016)

25  
26  
27 **3. Significance and Use**

28 3.1 With the proliferation of electronic devices (e.g., computers, cell phones, security cameras),  
29 it is difficult to imagine a crime that could not potentially involve digital images or video. Due to the  
30 prevalence of multimedia evidence, training is necessary in the areas of video analysis, image analysis,  
31 and photography.

32 3.2 Training topics introduced in this document may not fit the needs of individual  
33 organizations, when job-specific duties are limited to a subset of those listed. Each organization  
34 should determine the minimum training guidelines for examinations performed.

35 3.3 Training can quickly become obsolete, and continuing education is needed to maintain  
36 proficiency.

37 3.4 Additional training may be needed for new technologies and procedures that are not  
38 included in this document.

39 3.5 Refer to additional standards and guidelines for discipline specific guidance that requires the  
40 use of video analysis, image analysis and photography.

#### 41 **4. Training-to-Competency Programs**

42  
43 4.1 Video analysis, image analysis, and photography play fundamental roles in the investigation  
44 and prosecution of crimes. The collection, preservation, examination, and analysis of video and  
45 images require a foundation in the practical application of image science, photography, image and  
46 video technology, and the law. Because of the paucity of degree or certificate programs in  
47 multimedia forensic analysis, practitioners have historically relied on practical training through law  
48 enforcement or vendor-specific programs or both. A forensic practitioner of image and video  
49 analysis or photography should be capable of integrating their knowledge, skills, and abilities in the  
50 identification, preservation, documentation, examination, analysis, interpretation, reporting, and  
51 testimony.

52 4.2 As in all forensic disciplines, a combination of personal, technical, and professional criteria  
53 will influence a prospective video or image analysis or photography practitioner's suitability for  
54 employment. New employees may be hired provisionally or go through a probationary period that  
55 requires successful completion of additional training or competency testing or both as a prerequisite  
56 for continued employment.

57 4.3 Training program content should be designed to include core elements for each role.

- 58 4.3.1 Policy
- 59 4.3.1.1 Organization of the laboratory
- 60 4.3.1.2 Handling of samples and evidentiary material
- 61 4.3.1.3 Handling of services and supplies
- 62 4.3.1.4 Dealing with clients, requests, and complaints
- 63 4.3.1.5 Laboratory information management system (LIMS)
- 64 4.3.1.6 Case review process
- 65 4.3.1.7 Audits and assessments
- 66 4.3.1.8 Proficiency testing process
- 67 4.3.2 Legal Issues:
- 68 4.3.2.1 Specific legal requirements to include admissibility issues (e.g., Daubert v.  
69 Merrell Dow Pharmaceuticals (1993), Frye v. United States (1923), Federal Rules of  
70 Evidence (Rules 701-706), etc.)
- 71 4.3.2.2 Overview of the criminal justice system
- 72 4.3.2.3 Courtroom testimony
- 73 4.3.2.4 Moot court exercises, including admissibility issues (e.g., Daubert v. Merrell  
74 Dow Pharmaceuticals (1993), Frye v. United States (1923), Federal Rules of Evidence  
75 (Rules 701-706), etc.)
- 76 4.3.2.5 Testimony monitoring
- 77 4.3.3 Human factors relating to forming opinions in analysis (e.g., cognitive bias)
- 78 4.3.4 Discipline-specific topic areas in the training program should include the  
79 following:
- 80 4.3.4.1 Forensic image and video analysis practitioners and photographers shall  
81 understand the basic principles of digital multimedia evidence handling to include  
82 integrity of the media, metadata, file structure, and reporting as required by the  
83 Forensic Science Service Provider (FSSP).
- 84 ○ Multimedia management – knowledge of procedures to protect the security and the  
85 integrity of images

- 86 ○ Multimedia file types – understand the various image file types and when to use
- 87 (e.g., jpg, RAW, tif, mp4, avi, mov, heic)
- 88 ○ Metadata/EXIF data - understand characteristics of the metadata and how it can be
- 89 modified through distribution
- 90 ○ File structure - understand characteristics of the file structure such as header and
- 91 footer signature, file hash-identification, and how it can be modified

92

93 4.3.4.2 Forensic photographers, to include crime scene and laboratory

94 photographers, shall understand basic photography concepts as well as the function

95 and use of cameras used by the FSSP. As training may not be necessary in all areas, a

96 training program may be customized for the types of evidence a photographer will

97 encounter.

- 98 ○ Knowledge of camera equipment – cameras, lenses, filters, flashes, or other lighting
- 99 ○ Knowledge of camera operations – date and time settings, image file settings,
- 100 adjustment of ISO, shutter speed, aperture, white balance, manual and auto focus,
- 101 stabilization, lens types, metering modes, and the use of various flash units
- 102 ○ Knowledge of photography concepts - exposure, depth of field, distortion, and
- 103 composition
- 104 ○ General scene documentation – ability to photograph overall, medium, and close-
- 105 range photographs
- 106 ○ Examination documentation – properly document impressions, friction ridge
- 107 evidence, blood spatter, and other pattern evidence
- 108 ○ Subject photography (living and deceased persons) – documentation of subjects, to
- 109 include scars, marks, and tattoos
- 110 ○ Photography of vehicles – documentation of the interior and exterior conditions of
- 111 the vehicle, any associated evidence in or around the vehicle, and the vehicle’s
- 112 location
- 113 ○ Knowledge of various lighting techniques for proper documentation of evidence
- 114 ○ Specialized photography (e.g., trajectory, aerial photography, panoramic
- 115 photography, blood stain patterns, chemiluminescence (e.g., Bluestar®, luminol),
- 116 photomicrography, full spectrum photography (e.g., UV/IR and fluorescence) and
- 117 techniques related to other forensic disciplines) (as necessary)
- 118 ○ Image processing – understand the various basic and advanced techniques used to
- 119 process images and their limitations

120

121 4.3.4.3 Forensic practitioners specializing in image analysis shall understand the basic

122 engineering and scientific principles associated with imaging systems which include

- 123 imaging physics, photographic science, human vision and perception, image capture  
124 and display technologies (both analog and digital), and digital image processing.
- 125 ○ Image comparison theory – the background of image comparisons and the  
126 significance of features depicted in questioned or known objects or images, as they  
127 relate to forming an opinion regarding source determination.
  - 128 ○ Photogrammetry theory – methods of measuring objects in photographs with  
129 accuracy
  - 130 ○ Imaging artifacts – features and characteristics introduced through image systems  
131 and processing (e.g., compression)
  - 132 ○ Advanced image processing techniques – methods to improve clarity of details  
133 pertaining to aspects of an image’s recorded content
  - 134 ○ Content authenticity – methods to determine if content has been altered.
  - 135 ○ Source authenticity – methods to determine if the provenance of data has been  
136 altered
  - 137 ○ Signal analysis – methods to determine how signals influence or may be captured in  
138 image
  - 139 ○ Specific domain knowledge for content analysis and comparison
  - 140 ○ Knowledge of methodology for comparative analysis - ACE-V, a method which  
141 entails the analysis, comparison, evaluation, and verification of comparative  
142 examinations
  - 143 ○ Statistics and probability
  - 144 ○ Evaluation of measurement of uncertainty
- 145
- 146 4.3.4.4 In addition to the criteria outlined above for image analysis practitioners,  
147 forensic practitioners specializing in video analysis shall understand video technology  
148 fundamentals such as image science, audio principles, video theory  
149 and the acquisition, assessment, processing, and analysis of video evidence.
- 150 ○ Data acquisition - properly recognize, protect, and collect data from DVR systems  
151 and cloud-based platforms
  - 152 ○ Data assessment - examination suitability, file attributes, determination of the  
153 regions of interest, and the preparation of a working copy to be used during an  
154 examination
  - 155 ○ Knowledge of video analysis tools - hardware and software, including the ability to  
156 research, evaluate, and properly use third party software and codecs
  - 157 ○ Knowledge of processing methods - transcoding, enhancement, restoration, basic  
158 byte level analysis, and timeline sequence reconstruction

159                   ○ Knowledge of analysis methods - includes image analysis principles listed above

160
