Biology/DNA SAC Membership and Liaisons

Jason Byrd, **Ph.D.**, University of Florida

Thomas Callaghan, **Ph.D.**, Federal Bureau of Investigation

Robin Cotton, **Ph.D.**, Boston University

Phillip Danielson, **Ph.D.**, University of Denver

Simone Gittelson, **Ph.D.**, University of Technology – Sydney

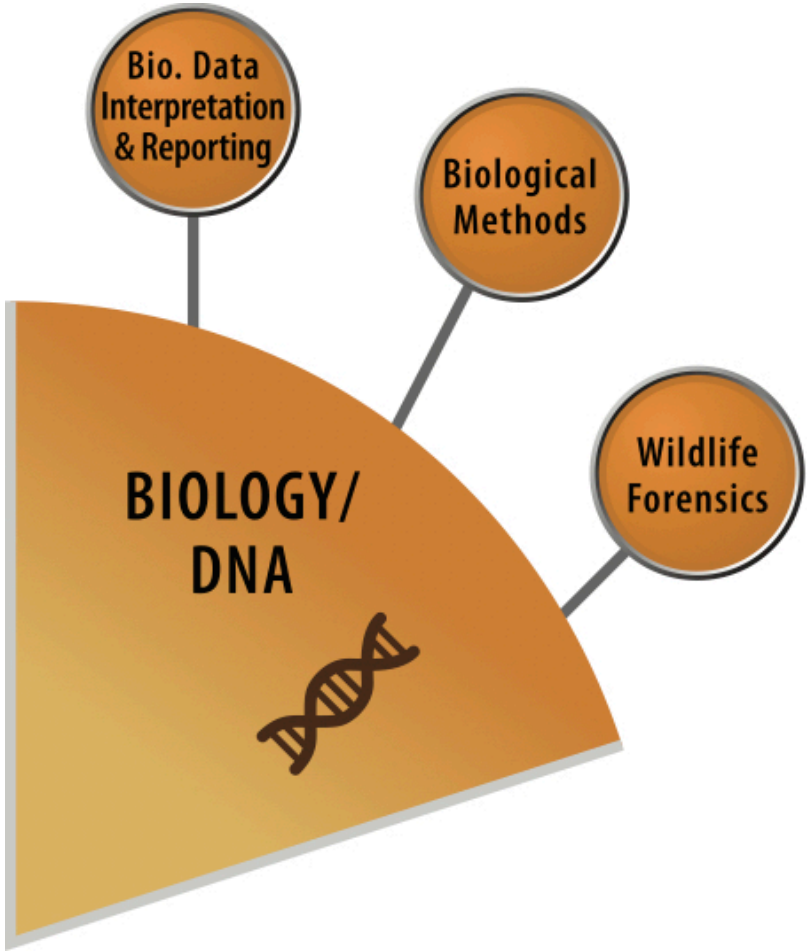
Bruce Weir, Ph.D., University of Washington

Ex-Officios - Erin Morris, Ph.D., Behavioral Sciences Research Analyst, Los Angeles County Public Defender (HFC)

Jennifer Friedman, Deputy Public Defender, Los Angeles County, California (LRC)

Timothy Kupferschmid, Chief of Laboratories, New York City Office of Chief Medical Examiner (QIC)

OSAC
Organization of Scientific Area Committees for Forensic Science



The Biology Scientific Area Committee provides strategic direction within the Biology Discipline, serves as a platform to integrate similar standards activities across multiple forensic science disciplines, and manages the activities of the following subcommittees:

Biological Methods

Biological Data Interpretation and Reporting

Wildlife Forensics

SAC Activities

Biology SAC members work closely with the SC and TGs in identifying needed standards, development of new standards, as well as identifying research needs for the forensic biology community. Additionally, they are available to help with implementation of OSAC Registry Standards in your laboratory.

The Biology SAC works closely with SWGDAM to ensure our efforts are complemented.

Kimberly Murga, Subcommittee Chair, Las Vegas Metropolitan Police Department
Margaret Sanger, Ph.D., Subcommittee Vice Chair, Retired
Jason Befus, Subcommittee Executive Secretary, Maryland State Police Forensic Sciences Division

ASB Published Standards Going Through the OSAC Registry Process

ANSI/ASB Standard 020, *Standard for Validation Studies of DNA Mixtures, and Development and Verification of a Laboratory's Mixture Interpretation Protocol*, First Edition, 2018

This standard sets forth the requirements for the design and evaluation of internal validation studies for mixed DNA samples and the development of appropriate interpretation protocols for mixtures based on the validation studies performed. This standard includes a requirement that the laboratory verify and document that the mixture interpretation protocols developed from the completed validation studies generate reliable and consistent interpretations and conclusions for the types of mixed DNA samples typically encountered by the laboratory. This standard applies to any type of DNA testing technology and methodology used, including but not limited to, STR testing, DNA sequencing, SNP testing, haplotype testing, traditional and rapid protocols, etc., where mixtures of DNA may be encountered, analyzed and interpreted.

ASB Published Standards Going Through the OSAC Registry Process

ANSI/ASB Standard 019, *Wildlife Forensics General Standards*, First Edition, 2019

This document provides minimum standards and recommendations for practicing wildlife forensic analysts. This document covers good laboratory practices, evidence handling, and training as well as considerations of taxonomy and reference collections that are specific to wildlife forensic science.

ANSI/ASB Standard 028, *Wildlife Forensics Morphology Standards*, First Edition, 2019

This document provides minimum standards for wildlife forensic analysts in the sub discipline of morphology.

ANSI/ASB Standard 029, *Report Writing in Wildlife Forensics: Morphology and Genetics*, First Edition, 2019

This document describes the information to be provided in formal written reports of wildlife forensic examinations for use in legal proceedings. Requirements for both genetic and morphological examination reports are covered. Forensic reports serve a variety of audiences, and must provide a clear and concise summary of methods, results, and limitations.

ASB Published Standards Going Through the OSAC Registry Process

ANSI/ASB Standard 046, *Wildlife Forensics Validation Standards—STR Analysis*, First Edition, 2019

This document provides minimum standards and recommendations for validating new nuclear STR (short tandem repeat) markers for use in wildlife forensic DNA laboratories where the STR genotyping method has already been validated.

ANSI/ASB Standard 047, *Wildlife Forensics Validation Standard—Validating New Primers for Sequencing*, First Edition, 2019

This document provides minimum requirements and recommendations for validating new primers for mitochondrial haplotyping and/or taxonomic identification via sequencing in wildlife forensic DNA laboratories where the sequencing (Sanger) method has already been validated.

ANSI/ASB Standard 048, *Wildlife Forensic DNA Standard Procedures*, First Edition, 2019

This document provides minimum requirements for forensic DNA analysis of wildlife evidence including general laboratory practice, DNA extraction and amplification, analysis and interpretation, statistical support, sequencing, mitochondrial DNA haplotyping, taxonomic identification, STRs and data analysis.

Research Needs

Biological Methods:

- **To Improve the Analysis of Serological Evidence: ID of Body Fluid**

Research Needs

Biological Data Interpretation & Reporting:

- **Assessment of Specific Classes of Evidence Types to Determine the Necessity to Quantify DNA Before Amplification of Human Autosomal STR Loci**
- **Characterizing, Designing and Constructing Integrated DNA Mixture Interpretation Solutions**
- **Proficiency Testing for Complex Data Interpretation and Biostatistical Evaluations**

OSAC
Organization of Scientific Area Committees for Forensic Science

Research Needs

Wildlife Forensics:

- **Development of New Technologies for Discovery and Characterization of Forensically Useful Markers of Relevant Species' Biogeography**
- **Validate STR/SNP Panels for Species of Forensic Interest Using the OSAC DNA Validation Standards**
- **Develop STR/SNP Panels (Including Any Necessary Allelic Ladders and Databases) for Current Species of Forensic Interest**
