WHAT ATTENDEES ARE SAYING

I enjoyed **interacting with a range of attendees** including first responders, NIST staff, academics, and companies.

Having sessions where it was an open forum for people to **talk, present ideas, and really connect with each other** were a really nice addition. I felt like I got more out of those sessions than I got out of more traditional breakouts held in years past.

Add **more time for technology demonstrations. And stagger demos** more so that people who are doing demos have time to see other demos

Great time to **share ideas** and see what is coming down the road for fire safety.

Networking opportunities were fantastic. The mobile app was likewise remarkable.

I loved the different **campfire sessions** - the variety made it feel like a “**choose your own adventure**” series.

Having material presented in on-demand sessions that wasn't available elsewhere throughout the week meant that **some stuff just got missed.**

As an innovator, I liked **connecting with first responders and public safety personnel** to better understand the challenges and needs.

It was **difficult to hear** the conversations in the outdoor breakout sessions.

For time-intensive technology demonstrations, allow attendees to **sign up in advance.**

TOP WORDS ASSOCIATED WITH PSCR 2022
