Touch for HUD. Wear to use.

Touch to Teleport to the

Step #12: view

Patches for:

```

age
year
patch-color

```

The color of Patches for:

You can have access to:

```

age + 5
heading + 90
if patchdown? (F4 1)

```

All state variables, with example:

```

set color red
set pc pc + 1

```

Note that the set command

You can create new state

NetLogo automatically creates a collection of new procedures to facilitate the use of the variable. For example, if you create the variable `age` for the turtles, then the turtles can use the procedure `set-age` to change the value of the variable, and they can use the procedure `age` to access the value of the variable.

You create new variables with the commands `create-turtles`, `patches`, and `globals`. You can type these commands in either the turtle procedure window or the monitor procedure window (but not both), like this:

OK Cancel
