

“Capió Sensus” ~ To understand the senses

***We write software that gives
robots more spatial intelligence.***

We need *smarter* robots

\$620 billion

- U.S. labor cost / year on “physical work done in highly structured and predictable environments” that **could be automated** with “currently demonstrated technology.” ~ *2017 McKinsey study*

\$2 billion

- 2018 U.S. robot sales

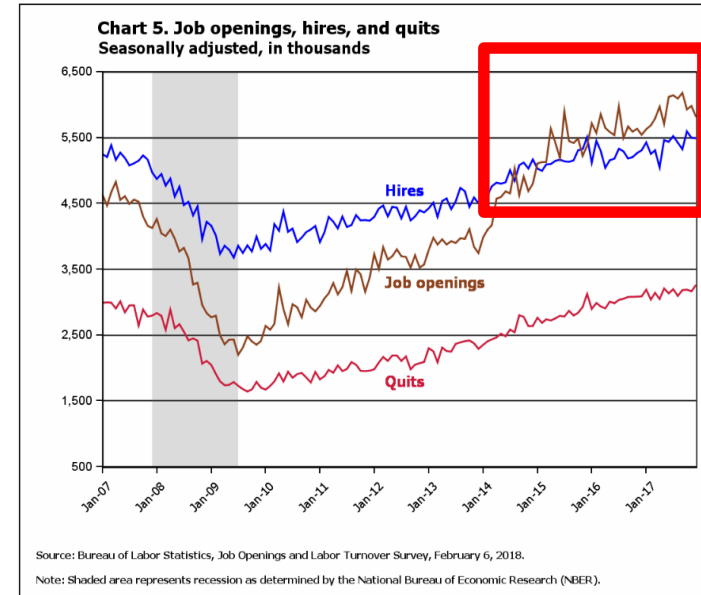

50 to 1

- Person-to-robot worker ratio in U.S. manufacturing (14 to 1 in S. Korea)

We need smarter robots *now*

- **Labor shortages due to:**
 - **3.5%** unemployment
 - **10,000** baby boomers reach retirement every day

- **550,000** American manufacturing workers injured on the job in 2017 (**272 deaths**)

Hard jobs for robots

These tasks are:

- Physically demanding
- Extremely repetitive

But still require a great deal of spatial intelligence:

- Fine manipulations
- Hand-eye coordination
- Picking in clutter
- Operating machinery

<https://drive.google.com/open?id=14SuiUOtyq7SjQO8P6obsjFPjQ5XPeWFO>

Our Solution

CapSen PiC™

3D vision software, full motion planning & control

- Pick objects from clutter
- Precise placement (position & orientation)
- High-level task planning:
 - Disentanglement
 - Stacking / Unstacking
- Fast cycle time (1 sec. image processing / planning)
- Wide range of part sizes (1 cm – 1 meter)
- Works with any robot
- Supports multiple 3D cameras

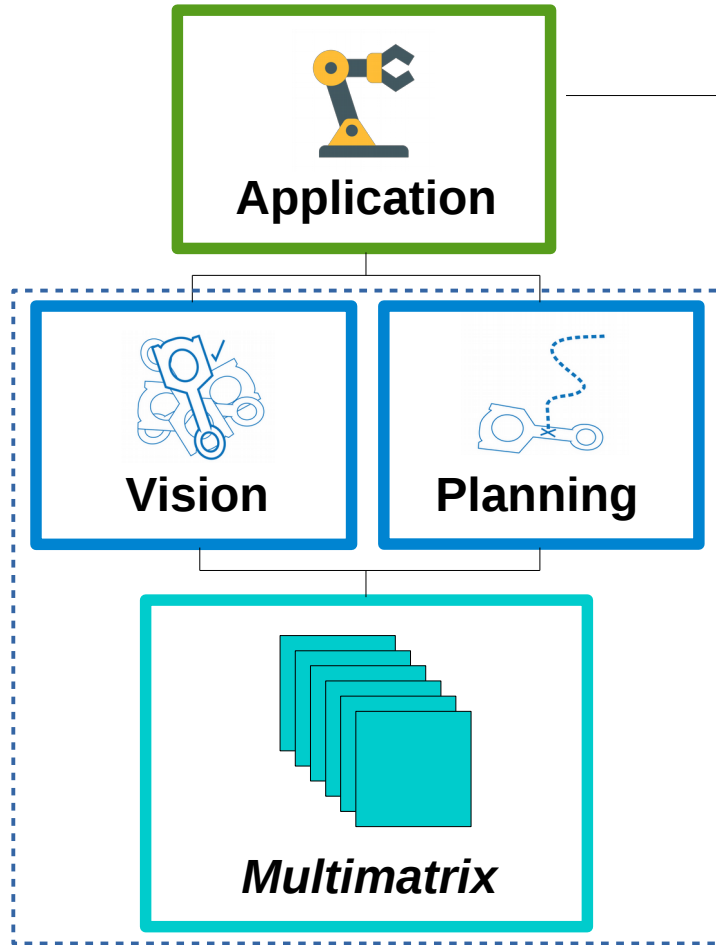

Bin Picking

Palletizing / Depalletizing

Our Platform

To meet your challenges, we offer:

➤ **Existing solutions**

- Bin picking
- Machine tending
- Palletizing / Depalletizing
- 3D Scanning / Object Recognition

➤ **Advanced R&D capabilities**

- Custom systems for your needs

➤ **CapSen SDK**

Extensive software infrastructure
Developed in-house

GPU-accelerated

Multimatrix—a CapSen-developed software library for parallel matrix computations

Our demo videos

Overview of CapSen capabilities

<https://drive.google.com/open?id=1qKbHFjBaSNHpiKN-H0xRsexRuaslXVQI>

Hook picking robot we recently installed at a wire & spring factory:

<https://youtu.be/fcvulzMQ1kg>

Picking springs:

<https://photos.app.goo.gl/HbnLtW4mSVq5aVVY9>

Picking screws:

<https://drive.google.com/a/capsenrobotics.com/file/d/10JxloRsfS1YCitcN6QZymAZ9H-pHWesn/view>

Picking bolts with a magnet:

<https://drive.google.com/file/d/1Hz4MOgHcRHC2ZFT5UHKwjWE8OFvog1Kc>

Picking bolts with fingers:

https://drive.google.com/open?id=1yBsN0STPLhIWTPqYK_BOx4ZtU-LfUZTM

Recent installations

Wire & Spring Manufacturer

- **Pick** hooks out of a bin and insert them into a press

Fortune 500 Nuclear Tech. Company

- **Scan** and **spray** objects the robot has never seen before

Competitive advantage

- Complete solution (vision + **motion planning** + control)
- **World's first entangled-part bin picking**
- Can detect & pick **very small parts** (screws, nuts, etc.)
- Multiple competitors in **bin picking**
- Most provide only vision + grasp analysis (not full motion planning)

- We're not a bin picking company...
we're a spatial intelligence company

Application #1

- Traditional manufacturer (80+ years)
- Experts at what they do
- Family business

- **Rich (Ace Wire Spring):**
Nobody likes doing this job.
Can we use a robot?

- **Rich (Ace Wire Spring):**
Nobody likes doing this job.
Can we use a robot?

- **Jared (CapSen):**
 - *Random bin picking*
 - *Small, complex parts*
 - *Precise placements*
 - *Parts can get entangled!*
 - *Never been done before...*

- **Step 1**

Scan in 3D models of the objects to be picked

- **Step 1**

Scan in 3D models of the objects to be picked

- **Step 2**

Make sure our detection software can accurately locate the objects

- **Step 2...**

Make sure our detection software can accurately locate the objects

- **Step 2...**

Make sure our detection software can accurately locate the objects

This is what the robot sees →

- **Step 2...**

Make sure our detection software can accurately locate the objects

- 1. Select a 3D sensor**

- PhoXi M

- **Step 2...**

Make sure our detection software can accurately locate the objects

- 1. Select a 3D sensor**

- PhoXi M

- 2. Tune sensor params**

- Exposure times
- Proj. patterns (number & orientation)
- Noise filtering

- **Step 2...**

Make sure our detection software can accurately locate the objects

- 1. Select a 3D sensor**

- PhoXi M

- 2. Tune sensor params**

- Exposure times
- Proj. patterns (number & orientation)
- Noise filtering

- 3. Tune CapSen params**

- # detections vs. processing time
- (Optional) Train a new ML model

- **Step 2...**

Make sure our detection software can accurately locate the objects

- 1. Select a 3D sensor**

- PhoXi M

- 2. Tune sensor params**

- Exposure times
- Proj. patterns (number & orientation)
- Noise filtering

- 3. Tune CapSen params**

- # detections vs. processing time
- (Optional) Train a new ML model

- 4. Test**

- If not good enough, return to step 1, 2, or 3

- **Step 3**
Select a robot arm

Repeatability: 30 microns

- **Step 3**
Select a robot arm

Repeatability: 30 microns

- **Step 4**
Design fingers & fixtures

- **Step 5**
Task configuration

Application #2

Fortune 500 Nuclear Tech. Co.

- **Scan** and **spray** objects the robot has never seen before

Application #2

Fortune 500 Nuclear Tech. Co.

- **Scan** and **spray** objects the robot has never seen before

1. Some types of sensor noise are OK (multiple views are stitched together)

- Missing points
- Unbiased, Gaussian noise

Application #2

Fortune 500 Nuclear Tech. Co.

- **Scan** and **spray** objects the robot has never seen before

1. Some types of sensor noise are OK (multiple views are stitched together)

- Missing points
- Unbiased, Gaussian noise

2. Some types of 3D modeling errors are OK

- Small holes
- Missing details

Application #2

Fortune 500 Nuclear Tech. Co.

- **Scan** and **spray** objects the robot has never seen before

1. Some types of sensor noise are OK (multiple views are stitched together)

- Missing points
- Unbiased, Gaussian noise

2. Some types of 3D modeling errors are OK

- Small holes
- Missing details

3. System failures:

- **Collision**
(Due to missing object part)
- **Incomplete coverage**
(Due to incorrect model shape)

Lessons?

1. Many 3D vision-guided robotic applications (including bin picking) are still at the bleeding edge
 - Require customization / parameter tuning of sensors & software for each installation

Lessons?

- 1. Many 3D vision-guided robotic applications (including bin picking) are still at the bleeding edge**
 - Require customization / parameter tuning of sensors & software for each installation
- 2. Different applications can have vastly different performance metrics**
 - This argues for having many standards to choose from and/or complete end-to-end system testing
