Tracking No. 112-jpsa-b9c0
Comments Due: April 25, 2022
Submission Type: Web

Docket: NIST-2022-0001

Evaluating and Improving NIST Cybersecurity Resources: The Cybersecurity Framework and Cybersecurity Supply Chain Risk Management

Comment On: NIST-2022-0001-0001
RFI-2022-03642

Document: NIST-2022-0001-DRAFT-0015
Comment on FR Doc # N/A

Submitter Information

Organization: Validato

General Comment

Validato.io is a security controls validation platform that uses attack simulations based on MITRE ATT&CK techniques to test the effectiveness of security controls. The unbiased attack simulation results data is then mapped back to the NIST CSF framework. Validato is designed to provide CISOs and risk professionals with clear performance data on how they are able to protect against, detect and respond to cyber threats.

Expanding the attack simulation use case to test vendor and supplier security control effectiveness would be a logical next step. Validato would be open to collaborating with NIST to contribute to the creation of a workable and open standard to test and measure supply chain resilience to cyber threats.
